TABLE OF CONTENTS

FOREWORD

In this publication, which is the result of 15 years of research, I would like to make the reader familiar with the application of the advanced methods in Mundane Astrology that I have already applied in my trilogy, *Prediction* I, II and III.

It is to the credit of *Cyril Fagan, Nelson Page and Vendel Polich* that research in astrology developed to a point beyond the dreams of most astrologers. My close collaboration with these distinguished astrologers enabled me to refine their methods and make some new discoveries that were based on analogy as well as on new, independent findings.

Most of the astrological methods explained in this book can be handled with ease using the various computer programs that are now on the market for almost all computer systems. This applies to all the methods that are explained in *Prediction* (I), *Using Common and Prenatal Cycles*, and which are connected with the Universal Transit System, such as Transits, Solar and Lunar Returns, and others.

Today, Political Astrology suffers very much from the fact that there are only very few horoscopes of States with a secure recorded birth time. Ten well-authenticated and rectified Charts of some leading States published here should be a starting point for astrologers who intend to work methodically on this matter.

A broad range of astronomically correct and astrologically effective systems will enable the reader to choose those tools with which he is acquainted. For beginners I recommend the Universal Transit System demonstrated in my book *Prediction* (I). As can be seen in the demonstrated examples, satisfactory predictive work can be done when using various effective Cycles. For advanced students, *Prediction* II, *Directions and the Art of Rectification* should be a useful complement to work with approved Directions.

I wish to thank my friend *Dymock Brose* (Blackheath, Australia) who made the publication of this book possible through his kind assistance.

THE AUTHENTICATION OF STATE HOROSCOPES

True and effective Birth Charts for State Horoscopes have been, and still are, a serious problem in Political Astrology. For instance, there are dozens of charts that pretend to be the authentic horoscopes of the United States of America. In most cases of these well-known dates, such as July 7, 1776, the true times have not been recorded. To identify a chart where only the birth date is known is very difficult, as astrologers will agree. As the writer has often mentioned, experience shows that the delineation of a Birth Map alone is never a secure way to authenticate a birth time. This applies for so-called speculative birth times as well as for cases where we have the choice between several doubtful indications.

The method for the authentication of a birth time described below was originally applied for the horoscopes of individuals, and later became valid also for State Horoscopes. It does not require any special trigonometrical knowledge, and gives results that make the chart workable in almost all disciplines of the Universal Transit system [1]. Its advantage lies in the fact that the anlysis can be performed with Personal Computers as well as with a pocket calculator. Depending on the number of events in the history of a state, results can be achieved that narrow down the time to a few minutes. On the other hand this approximate identification of a chart means that the astrologer does not work on a totally fictional chart, which has often happened when astrologers relied on speculative birth charts that they constructed on a doubtful delineation of the map alone. The reader is advised to start his investigations on State Horoscopes where the date and approximate time is guaranteed by witnesses or reliable, written records.

Authentication of a Birth Chart with the aid of Precessed Lunar Returns.

We analyze the Birth Chart of the United Kingdom which came into operation officially on January 1, 1801, at 00h LMT = 00h 00m 32s U.T. (LONDON 0º W 08 ; 51º N 30'). **Fig. A**

Radical **MOON** position for the date and time above **19º Cancer 26'**
(The writer recommends computer programs available from
MATRIX Software, 315 Marion Ave., Big Rapids MI 49307, USA). -

The following method to analyse birth times is valid for any natal chart, whether there is a so called "dead - right" time or not. In all cases where a sufficient number of events is available the following analysis gives a secure approximate birth time.

<u>EVENT I</u>: The death of Queen Victoria, January 22, 1901.
Precessed Lunar Return January 1, 1801.
(Computation with the aid of a calculator with facilities to transpose minutes and seconds into decimals of a degree).

Radical MOON	19º	Cancer	26'
Precession for 100 years	1º		24'
Precessed MOON	20º	Cancer	50'
MOON Jan. 5, NOON	20º	Cancer	36'
Difference	0º		14'
Moons motion in 24h	13º		15'

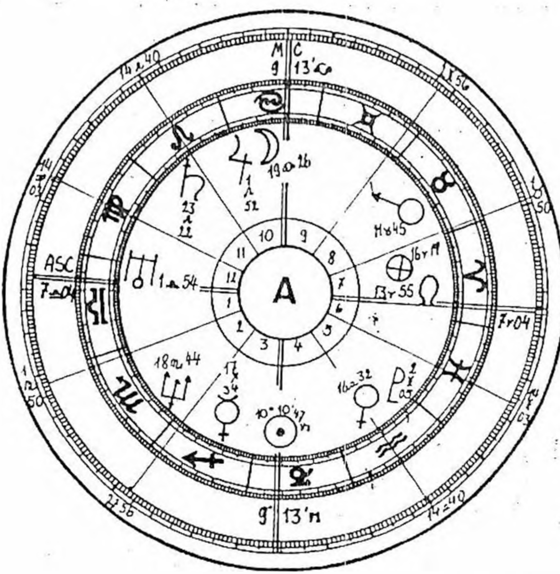

(0º 14' / 13º 15') x 24 = 0h 25m (Noon Ephemeris) =
January 5, 1901, 12h 25m
========================

	0h 25m	
+Acceleration	+ 4s	
+ Sid. Time at Noon, Jan. 5	18h 57m 32s	
Greenwich Meridian	19h 22m 36s	
LONDON slow	- 32s	
RAMC LONDON	19h 22m (seconds rounded off)	**<u>Fig. 1 A</u>**

Using the Table of Houses for London, 51 N 32 (in all Raphael Ephemerides back to 1840) we get for 19h 22m, MC = 19º Capricorn
ASC = 14º Taurus.

A glance at the Ephemeris shows the SUN high in the sky near the MC on 15º Capricorn in opposition to the MOON, 20 Cancer 50'. Even retrospectively this is not a satisfactory indication for the death of a Queen, although we may say that the Sun is generally symbolizing the head of a State, and the MOON the people. Again, other indications for the death, like the Descending Mean Node, SATURN and perhaps PLUTO, do not have Cardinal positions in this Chart.

<u>Rule 1 :</u> The most effective Lunar Returns for the characteristics of an event are generally to be found in charts the operational dates of which are nearest to the event.

United Kingdom (rect.)
1800, December 31 23h 59m 27s LMT
0° W 08' ; 51° N 30' RAMC – 100° 01.5'

These characteristics of any Precessed Lunar Return are very logical, because these charts reflect the psychological conditions and/or reactions of a native resulting from the main happenings in the operation period of the Cycle. In the present case, the operational date of the Precessed Lunar Chart happened to be 17 days before the event, within which events of a completely different character may have occured. For this reason it is necessary to compute the **Demi - Lunar** in all those cases where it is available.

This necessity arrises when the main (full) Lunar Return precedes the event by more than 14 days. The **Demi-Lunar Return** has to be computed for the Ecliptical point in opposition to the Radical Moon. In the present instance it is 19º Capricorn 26'.

In the Lunar Return above the writer has demonstrated the procedure in detail to show the astronomical connections. In practice, mainly when operating with Ephemerides, the computation process may be shortened with the following simplified method:

MOON for the Demi-Lunar 19º Cap 26' + precession(1º 24') =

	20ºCap	**50'**
MOON at Noon, Jan. 19	14º Cap	42'
Difference	6º	08'
Motion in 24h	13º	42'

(6º 08' / 13º 42') x 24 = **10h 45m** ,Jan. 19, 1901 Noon Ephemeris

Sid. Time + Acceleration 19h 55m (19h 53m + 2 m)

RAMC LONDON 6h 40m (30h -24h) **Fig. 1 B**

As the coordinates used for London are almost the same as those for Greenwich (difference = 32s), it may be neglected here.

From Raphael's Tables. of Houses, **MC 9º Cancer ; ASC = 7 Libra**

The Main characteristics for Queen Victoria's death are here:

SATURN = 10º Capricorn ; **VENUS** = 4º Capricorn.

Both planets are close to the IC, the lowest point of the Horoscope. These planets are accompanied by the **MOON**.

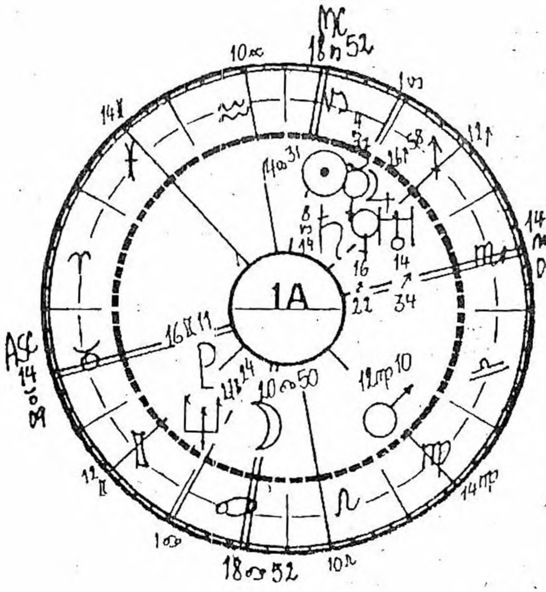

Interpretation : Saturn, the characteristic planet for death and mourning is within one degree of the IC. VENUS on the IC symbolizes the Queen, and the Moon (conjunct Saturn) the mourning population.

This retrospective interpretation might have been a prognostic one if Queen Victoria had previously suffered from a serious illness.

Rule 2: The most characteristic indications in Lunar Returns are Planets near the Angles of the Chart.

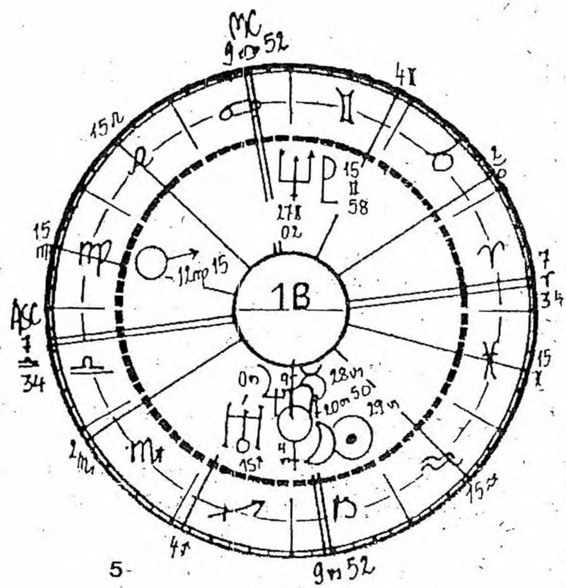

Rule 3: Secondly, for the character of the event, the shape of the Horoscope may play a considerable role.

PLR 1901, Jan 5

DEATH OF
QUEEN VICTORIA

DPLR 1901, Jan 19

In the present case the psychological conditions shown in this map are very discouraging and depressing indeed as seven planets are under the horizon, and are besides assembled on the weakest point of the Horoscope- the IC. The IC also symbolizes weakness, especially if, as here, the Sun is near the IC or in the 4th House

Refined computation with a sophisticated computer program gives a SATURN conjunction with the IC, which in the Ecliptic as well as in Right Ascension has an orb of only a few minutes of arc.

Rule 4 : With main events, characteristic planets for the event tend to appear very close to an Angle, preferably with an orb under two degrees.

EVENT 2 : **Declaration of War on Germany and Austria (World War I)** Aug 4, (12), 1914

Lunar Return 1914. July 22 11h 39m U.T. Precessed MOON = 21 Cancer 01

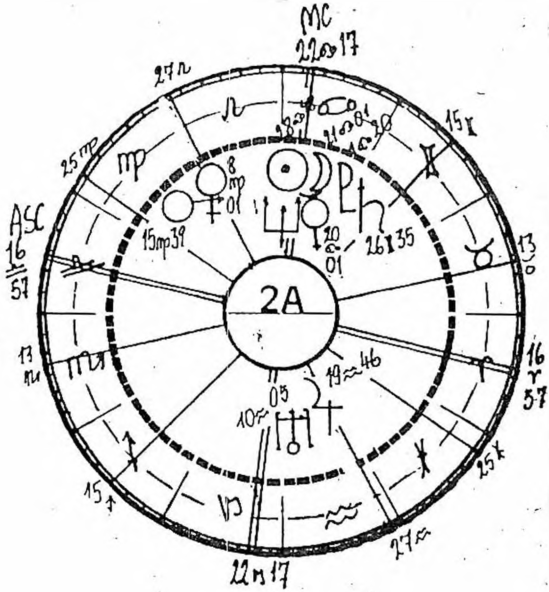

Fig. 2A

In this Chart the SUN is high in the sky near the MC - the active authorities of the State. The close conjunctions of NEPTUNE with the SUN and MC could have shown vagueness and confusion over the German attack on Holland and Belgium. The Ultimatum sent to Germany on August 4, is very convincingly shown by the almost exact MOON-MERCURY conjunction with the MC. However the actual declaration of war is not yet evident. It is very persuasively shown in the Demi-Lunar Chart, which is 13 days closer to the event, Aug. 4, 1914 9h 16m 36 s UT **Fig. 2B** Here Rule 1 (above) again comes fully into operation.

In this Demi-Lunar the great efficacy of PARAN's becomes very evident. Parans are Mundane Aspects of planets, the aspects having small orbs. They are measured in Right Ascension at the MC and IC , in Oblique Ascension (OA) on the ASC, and in Oblique Descension (OD) on the DESC. The computation of Parans (mundane planetary positions) is explained in *Prediction* I , pages 115 - 117 .

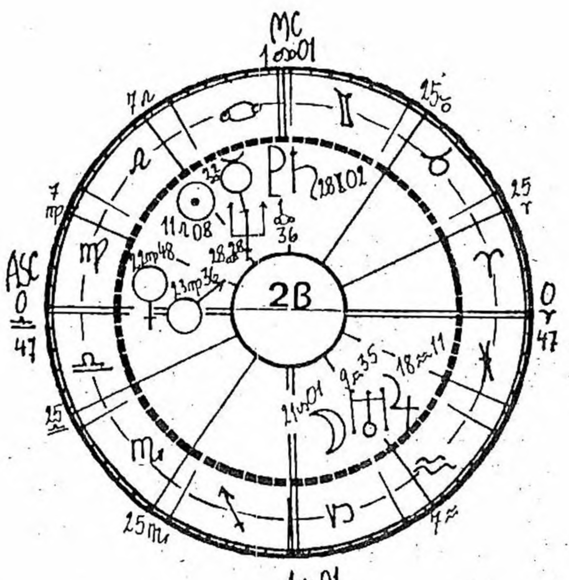

In our case we get the following effective Parans which symbolize the outbreak of war and its declaration on Germany by Great Britain :
Pluto has its strongest possible position - almost exact on the MC and in Mundane (Paran) and Ecliptical conjunction with Saturn (worries) It symbolizes the shock and the completely new situation (war). Very persuasive also is the Paran of MOON (4) and MERCURY (10) This Mundane opposition happens to be in Cardinal Houses and has an orb of only 41s (10' of arc) It is undoubtedly characteristic for the Ultimatum as well as for the declaration of war The actual indication for the outbreak of war however is shown by the Ecliptical and Mundane conjunction (Paran) of Venus and Mars just above the Ascendant. While Venus/Mars combinations are typical for hostilities and the outbreak of wars, Mars is sometimes replaced by Pluto.

PLR 1914, Jul 22

U.K.
DECLARATION
OF WAR

DPLR 1914, Aug 4

RULE 5 . The maximum power of Parans appears on Angles and House Cusps. Their efficacy deminishes rapidly when their positions become distant from the Cusps. This applies to Cyclic Charts as well as to Birth Charts. (See, Interpretation of **USSR 1** below)

Parans that do not obey this Rule should be neglected, though they are offered in some commercial computer programs.

For the authentication of State Horoscopes the writer recommends analyzing mainly deaths of rulers of States, outbreaks of wars, decisive battles and peace treaties. As experience shows, in all astrological systems these events always demonstrate the utmost effectiveness. In fact, events of this kind affect the whole population. Although the deaths of monarchs do not neccessarily have a strong effect on the population, they are very easy to infer because the death itself is always bound to a limited number of planetary symbols. On the other hand, events connected with wars are in most cases linked to more numerous symbols through being connected with a variety of circumstances. The same applies to peace treaties. The following Lunar Returns should demonstrate this.

Lunar Returns covering the Death of British Monarchs :

1. The death of Queen Victoria 1901, January 22
Fig. 1A and 1B (as demonstrated above)

2.The death of Edward VII 1910, May 6
Lunar Return 1910, April 16, 5h 27 U.T. **Fig. 3A**

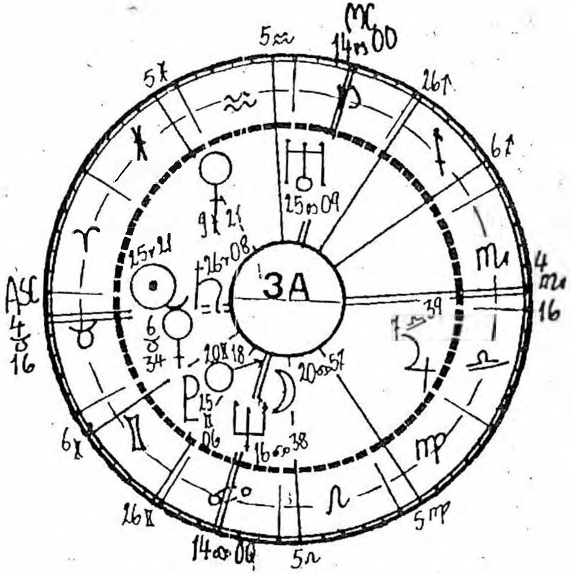

Four angular planets. The main very characteristic indication for Edward VII's death is SUN conjunct SATURN in XII near the ASC (orb 47' of arc).
This SUN/SATURN conjunction appears more characteristic in the
Demi - Lunar, 1910, April 30, 23h 44m U. T. **Fig. 3 B**
SUN and SATURN on either side of the IC .

U.K.
WAR WITH
ARGENTINA

DPLR 1982, May 26

The above demonstrated Lunar Returns and their Demi's showed with appropriate planets on the Angles that we have to deal with an authenticated birth time that is very close to the given one. Naturally, in this case we had to deal with a State Horoscope that went into operation at a time fixed beforehand. As we shall see later, the authentication of State Horoscopes with known dates and unknown times is much more difficult.

Final proofs should give the Primary and Secondary Directions in the Topocentric System. In the present case these can not only acknowledge the given time but, *vice versa*, also prove the true effectiveness of these Directions.

Primary and Secondary Directions for the Authentication of the United Kingdom's 1801 chart.

In the listed events MARS appears with its symbolism for war. The SUN and SATURN are for male monarchs, the MOON for female monarchs. URANUS, as a dominant planet in the Radix in most cases symbolizes the effect of surprise, and, if in neutral or harmonious aspects (as here the close sextile to Radical JUPITER) the lucky outcome of enterprises.

The 9th Cusp in State Horoscopes refers to dominating events where foreign countries are involved (politics, wars, etc.)

The 12th Cusp, appearing with MARS for the abdication of Edward VIII is a Significator here of compulsion and humiliation.

The MC, IC, ASC and DESC have a wide spectrum., especially in State Horoscopes.

While in birth charts of individuals Solar Eclipses do not play a dominant role, in State Horoscopes they seem to produce destiny in its purest sence. This is logical because Solar Eclipses, Lunar Eclipses and Lunations are charts of purely mundane character.

The writer has already emphasized in *Prediction* I that only those Lunations and Eclipses are worthwhile analyzing where they touch Angles or planets of the chart with a relatively smal orb.

There is still disagreement whether these phenomena have to be measured on the Ecliptic or in Right Ascension. However, experience mainly with PLUTO, a planet reaching high latitudes, confirmed the traditional teaching : The correct measurement is the Ecliptical one.

Further, the question arises whether the efficacy of an occultation for certain parts of the world is increased if these parts are directly touched by the occultation. So far the writer has not made any distinction between the different occultations, such as total or partial eclipses, or which parts of our globe are affected by it and which not. On the other hand this question seems to be more relevant in Mundane Charts that are not related to nativities but to geographic coordinates, in the same manner as Sun and Moon Ingresses into the Tropical Signs.

<u>RULE 6</u> : Lunations and Eclipses are highly efficacious only if they touch the Angles or planets of the Natal Chart. Oppositions also are valid, but have less efficacy.

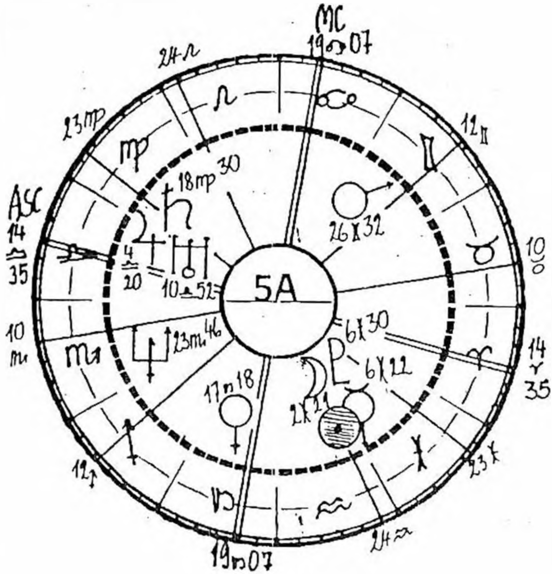

They are valid in the following order of effectiveness :
Conjunctions and Oppositions of the Lunation or Eclipse with :
(a) One of the Angles (orb within approximately 2 degrees)
(b) One of the Luminaries (orb within approximately 1.5 degrees)
(c) One of the planets or the Mean Ascending or Descending Node (orb within approximately 1 degree).

The Chart itself must be judged in the same way as an ordinary Cyclic Chart, provided that the points (a) to (c) are satisfied.

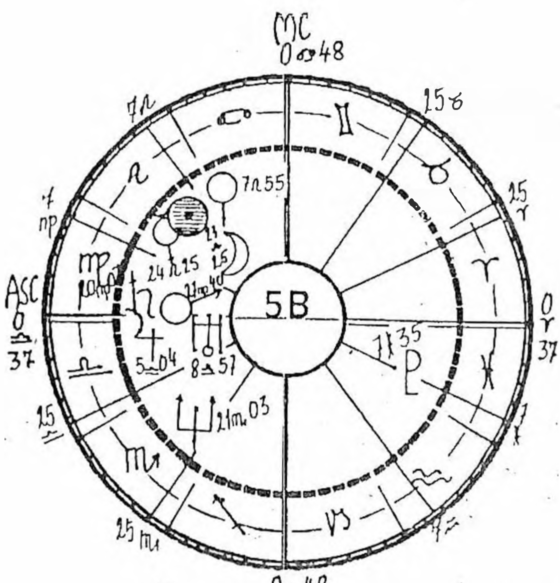

Extensive research with State Horoscopes revealed that in long time periods with an unusual quantity of decisive happenings.we can observe an unusual frequency of effective Solar Eclipses that sometimes continuously reinforce each other.

SOLAR ECLIPSE
1803, Feb 21

UNITED
KINGDOM

SOLAR ECLIPSE
1803, Aug 17

Of some interest here is a comparison of this frequency in the demonstrated chart of the United Kingdom.
From February 1803 to January 1815 there happened to be nine highly effective Solar Eclipses which all touched Angles or planets of the United Kingdom's Birth Chart. If we compare this frequency with other 12-year periods, we find that eclipses that fulfil the above mentioned conditions are quite rare.

Solar Eclipses in the Eventful Time Period of February 1803 to January 1815

1. Solar Eclipse 1803, Febr. 21, 21h 20m U.T. **Fig. 5a**
Eclipse 2º Pisces 21 ' conj. PLUTO rad, 2º Pisces 05
URANUS rising; sq. SUN rad ,VENUS close to the lowest point of a chart, the I.C.
MC conj. MOON rad (19') ; ASC conj Descending NODE rad
Main event : France breaches the peace treaty of Amiens - A new outbreak of war since 1803, May 16

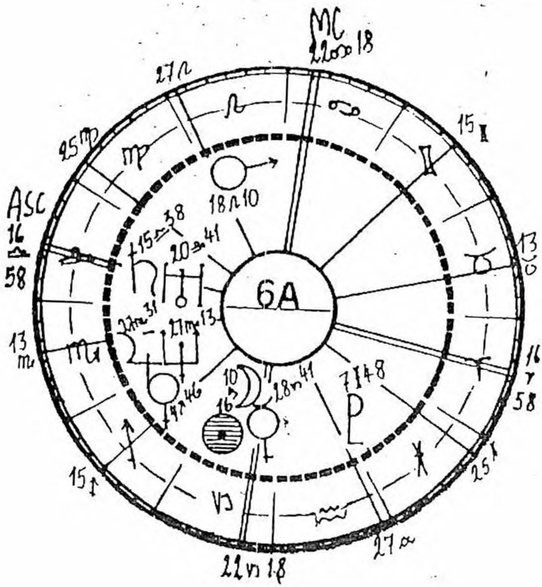

2. Solar Eclipse 1803, Aug. 17, 8h 25m U.T. **Fig. 5B**
Eclipse 23º Leo 25' conj. SATURN rad 23 Leo 23' (2')
MARS rising
The war continues.

3. Solar Eclipse 1805, Jan 1 0h 56m U.T. **Chart 6A**
Eclipse 10ºCap16' **conj SUN rad** 10ºCap11' and I.C. rad 9ºCap 13'
SATURN and URANUS on either side of the ASC
The Eclipse in a powerless position in House 3 near the I.C.

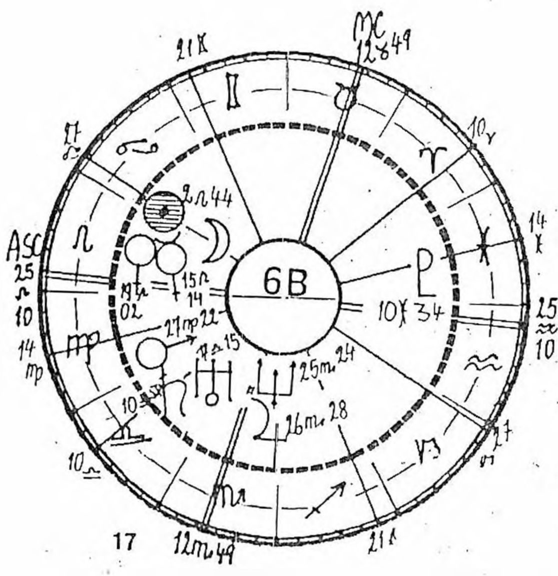

4. Solar Eclipse 1805, July 26 6h 28m U.T. **Chart 6B**
Eclipse 2ºLeo 44' **conj. JUPITER rad**
VENUS angular on ASC NEPTUNE conj. JUPITER in IV
MC conj. MARS rad, orb 1 degree.
The main event : 1805, October 21 . Victory in the sea battle of Trafalger, where the joint French and Spanish fleet was decisively destroyed, thus giving England dominance over the seas. Here NEPTUNE symbolizes the sea battle, while VENUS and JUPITER promised victory and success.

PREN SOL EC
1787, Dec 9

Prenatal Lunations and Eclipses

As repeatedly demonstrated, our Transit System with all its Cyclic Charts has an equivalent complement - the prenatal Transit System [2].
Exhaustive research into prenatal eclipses has revealed that they are equally as effective as the relevant common charts. As demonstrated below, eventful periods in the history of the United Kingdom are reflected in these converse charts with the same quantity and quality.

For the United Kingdom's most eventful time period during the first fifteen years of its existence, demonstrated with common Solar Eclipses, there are 7 Prenatal Solar Eclipses that fulfil the conditions given in Rule 6. Here are seven of the most effective ones:

1. Prenatal Solar Eclipse 1787, Dec. 9 16h 06m UT **Fig. 8**
corresponding to the Transit date **1814,** Jan. 24
Eclipse within 2' of arc conj. Mercury rad, conj. DESC Ecl.
(Treaties, agreements)

	RAMC =	319° 40'
PLUTO in mundane conj. with the RAMC =		319° 21' (19')
JUPITER rising	OA -90	319° 30' (10')
VENUS rad. conj. MC Ecl. (41')		

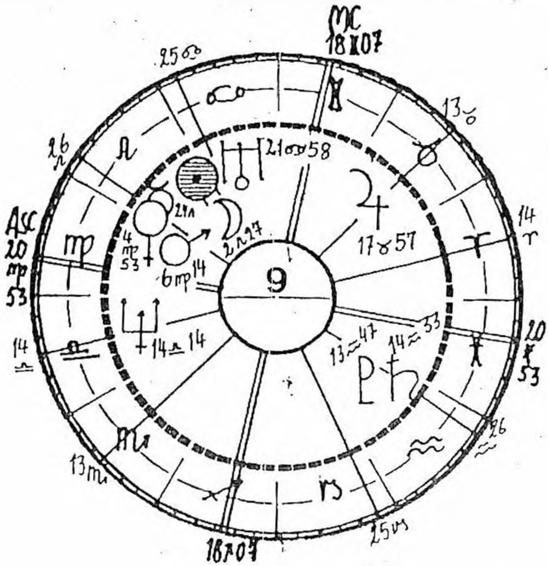

2. Prenatal Solar Eclipse 1786, July 25 8h 56m UT **Fig. 9**
corresponding to **1815,** June 10, preceding the victory at Waterloo by 6 days.(See Solar Eclipse 1815, Jan 10 above for the same event).
Eclipse within 35 ' of arc conj. JUPITER rad
Parans of VENUS conj. MARS (5')

3. Prenatal Solar Eclipse 1687, Nov 5 5h 22m UT **Fig. 10**
corresponding to **1914**,Febr. 26.
Eclipse 13 °Can 00' opp. **MARS** rad (1°) with Saturn and PLUTO Angular.

Prenatal Eclipses and Lunations

Computation and Significance

Prenatal Transits are usually computed to the day and to the time in hours, minutes and, eventually, seconds, (for Meridian distances in Oblique Ascension and MDO's) [3]. For Eclipses and Lunations the following approximate, simplified method is always sufficient.

EXAMPLE A: United Kingdom, as above, 1801, January 1.
Wanted: Prenatal date for 1944, June 6 (Invasion)

		y	m	d	
	a)	1944	06	06	
	b) -	1801	01	01	from right to left
difference subtract	c) -	143	05	05	" " "
wanted Prenatal Date	d)	1657	07	26	**1657. July 26**

In special cases (as in our example) for the subtractions the amount of a full year in months, and a full month in days, has to be added to the figures concerned. To subtract c) from b) we have to keep in memory the following figure for b : 1801 12 31. For calculation where the month is zero, the previous year with December has to be taken

Example B: Given Prenatal Solar Eclipse 1611, Dec. 4
wanted: Operational Postnatal date

	a)	1801	01	01	(1801 12 31)
	b)	1611	12	04	(1611 12 04)
	c)	189	00	27	
plus	a)	1801	01	01	
Operational Date		1990	01	28	= 1990 January 28

Example A is valid for the computation of all sorts of Prenatal Cycles.

The above method of tracing prenatal dates(A), or to find operational postnatal dates (B) is especially useful for dates that are very far back. For prenatal dates that are in the reach of the 19th century (1800 -) I recommend the Prenatal Transit Tables [4]

We have already learned that all correct astrological systems have adequate prenatal complements [2].
To a great degree this concerns Eclipses. Prenatal elements are in general much more individualistic than postnatal ones because they are always different for individuals, and especially for horoscopes of States. To illustrate this, here is one example.
Four people are killed instantly in a road accident.
The same transiting planets in the sky at the time of the accident apply to all four Radices, whereas the Prenatal Transits are entirely different for each one, because they depend on the birth dates and times of the people concerned.
The same applies to State Horoscopes, although we have special cases here in which the Postnatal Eclipses showed an impressive efficacy for all States concerned, if the different geographic coordinates of the Capitals are used. [5]
A problem, of course, is mass-catastrophies in which thousands of people perish at the same moment (atom bomb, earthquakes, etc.). In this case, by simple logic, it would be difficult to find satisfactory astrological indications. This is a sort of supernatural problem that so far has not been solved with the astrological tools at present available, and which is a very good argument of those scientist who deny the validity of astrology. Nevertheless, there should be an answer some time to this problem which touches mundane spheres of which we are not at present aware.

The writer originally had a very poor opinion of charts that had been fixed beforehand and came into force at midnight. This gives for all States that have been founded by Great Britain a Sun position on the IC. In general this maybe regarded as unfortunate, especially if the Sun receives unfavourable aspects, or if the chart has dominating malefics high in the sky.
In the United Kingdom's 1801 Chart it is different. The weak position of the Sun is compensated by a very powerful Full Moon, high in the sky, close to the MC and in its Domicile. As frequently stated, the writer respects Domiciles, Dignities and Detriments of planets only in the Horoscopes of States and in those of people who have achieved world-wide importance. This statement is an empirical result achieved through the analysis of over 200 rectified birth charts.
Besides this, logic does not permit that, for instance, all people born within a considerably long time period with a couple of planets in Detriment have to suffer an unfortunate destiny. This applies mainly for malefics that remain in the Tropical Signs for years. It is different especially in Horoscopes of people who influenced or even changed the course of history. Here the malefics as well as benefics have reflected events in accordance with their cosmic conditions (Hitler, Kennedy and others).

The very close sextile of JUPITER in the 10th House to the dominating URANUS on the Ascendant may be regarded as the most favourable aspect in the Chart of the United Kingdom URANUS is the initiator of Britains successful conquests of large territories It also symbolizes the support of the United States, which helped England to survive two World Wars, as Uranus is in a close trine to the 9th Cusp (Topocentric), in Gemini. Both Uranus and Gemini are characteristic for the United States. These two factors are also favourable in West Berlin's chart. (Fig F)

The considerable number of wars that England had to endure, with varying results, is symbolized by VENUS (Cusp 5 - hazards) in square to MARS, which is weakened in Taurus The close trine of URANUS and the close sextile of JUPITER to Cusp 9 is favourable for communication with foreign countries. On the other hand, the close sesquiquadrate of URANUS to VENUS could reflect that finally all the conquests vanished through developments after peace (Venus) in 1945.

The financial situation was at first favoured by the close trine of PLUTO to Cusp 2 (Scorpio, its Domicile) However, JUPITER the general Significator of wealth by its symbolism is in an almost exact square to Cusp 2 (Orb 2' of arc). Finances are now miserable Will they improve through the PLUTO aspect and/or the close semisextile of URANUS ?

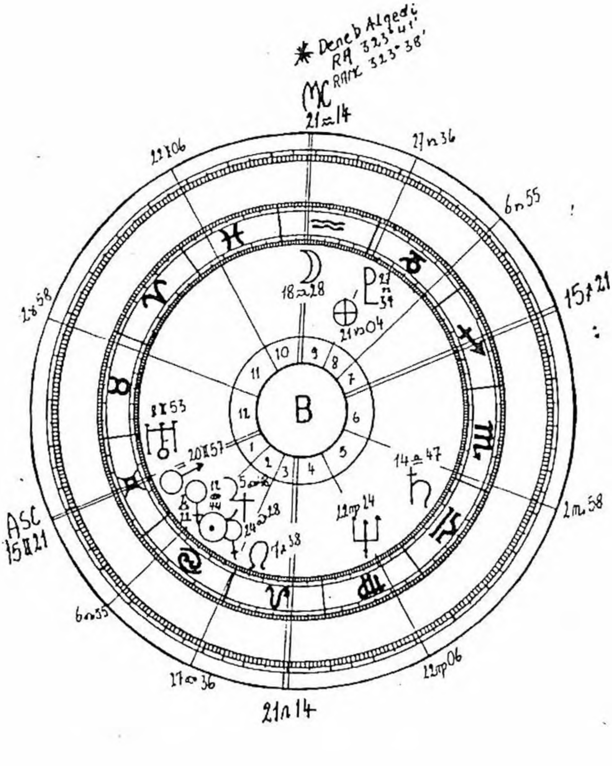

England is a Kingdom, but only in the domestic sense - SUN on the IC in the 4th House. As is well known, the monarch's in England have not the slightest executive power (SUN opposite the MC), which applies also for many States founded by the United Kingdom

NEPTUNE is in trine to the dominating MOON, and in a favourable Reception (Scorpio, Pisces) with PLUTO. This might reflect England's successful deeds in most sea enterprises from Trafalgar(1805) to the occupation of the Falkland Islands (1982). Here the close Midpoint of SUN/MC to NEPTUNE/ PLUTO could be of some importance.

This brief analysis of England's characteristics and developments since 1801 should as usual show that the main indications (priorities) for the character and the development of a birth chart are always close aspects of planets to Angles and House Cusps, and, secondly, close mutual aspects of planets with the Angles and House Cusps.

A recommended procedure for the delineation of all sorts of birth charts is to reduce the great number of Midpoints to those that have a purely individual character (through connection with the Angles) and the use of small orbs for Midpoint aspects.

To give the reader the possibility of working with Prenatal Eclipses, Tables for these are given in the Appendix for the United Kingdom and Soviet Russia

USA I 1776, July 4 7h 43m 40s U. T. (rect.)
Philadelphia 75º W 10' ; 39º N 57'

The Traditional Horoscope of the United States
Authenticated, Rectified and Verified with Reliable Methods

USA I 1776, July 4, (rectified) : 7h 43m 40s Universal Time
Philadelphia 75º W 10'; 39º N 57' Fig. B

A delineation of the traditional 1776 map seemed to be quite appropriate for the character of the United States, and a glance through the Ephemeris from 1800 on shows significant aspects for many main events. The Ascendant and Uranus played the principal role here, frequently in conjunctions with transiting planets

This map has been rejected by many astrologers : Two o'clock in the morning could not possibly be connected with the Constitution of a State, as people are usually asleep at this time. However speculations like these have often produced errors. '*Gray are all theories*' said *Wolfgang von Goethe* in his 'FAUST'.

As the writer has often mentioned, experience shows that the delineation of a birth map alone is never a secure way to authenticate a birth time. This applies particularly to so-called "speculative" birth times but also to cases where we have the choice between several different times

Authentication of the U.S. A. Chart as demonstrated with the State Horoscope of the United Kingdom

As the basis for my analysis I have provisionally fixed the birthtime of our U.S.A chart at 7h 13m Universal Time; July 4, 1776 For the astronomical elements a quite accurate computer program has been of immense help with results that can match the different computer services

In addition to the necessary Ephemerides for events from 1850 on, Raphael's Tables of Houses for Northern Latitudes 0º to 59º are recommended This handy booklet allows one in the shortest possible time to pick the Angles for a computed Local Siderial Time.

The Disaster of Pearl Harbor 1941, December 7

1941		100 y = 1º 24' Table
1776		65 y = 54'
165 years	**PRECESSION**	**= 2º 18'**

Radical MOON 18º Aq 28' (final position of rectified Fig 8 taken)
plus 2º 18'
MOON precessed 20º Aq 46' Corresponding Lunar April 4 (Noon Ephemeris)
9º Aq 57' MOON, Nov. 24, 00h
Difference 10º 49'
13º 25' Moon's motion in 24 hours

Computation with a pocket calculator:

$\frac{10º\ 49' \times 24}{13º\ 25'}$ = 19h 21m U.T. approx. correction for 2nd diff.[6] = 19h 17m

19h 17m	
+ 3m	acceleration for 19h 21m
+ 4h 10m	S.T. Nov. 24, 1941, 00h
23h 30m	RAMC Greenwich
- 5h 08m	Washington slow
18h 22m	RAMC WASHINGTON

Adjusted time with 2nd differences 19h 16m 30s (Precision method)[7]
RAMC WASHINGTON = 18h 21m 52s **Fig. 16**

Naturally, no conclusions can be reached from a single Chart, either as regards its authenticity or its capacity for rectification; a great number of charts have to be computed in this way.

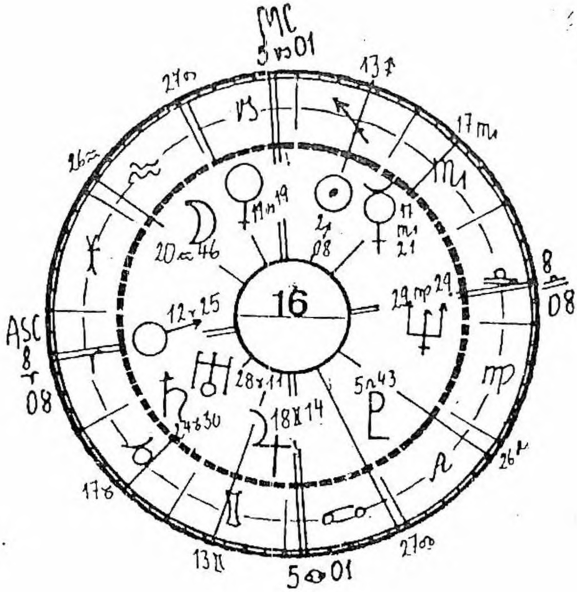

With (1) a pocket calculator, (2) the appropriate Ephemeris* and (3) a Table of Houses for Pekin** always open and ready for use, it is possible to compute a large number of charts in a short time. For this radix being discussed about 60 Lunars have been analysed in this way.

For the verification and approximate rectification of any natal chart, whether a personal or a mundane, we have to keep in mind that the significant planets with an appropriate symbolism for the particular event tend to be close to the Angles of a Cyclic Map. Experience also shows, that a large percentage of charts, if rectified, have appropriate planets (sometimes two, or even three) on the Angles of the Lunar Return figure, with an orb of one degree or less.

*Here the *Deutsche Ephemeride* 1850 - 90 ; 1890 - 1920 and Raphael, up to date have been used

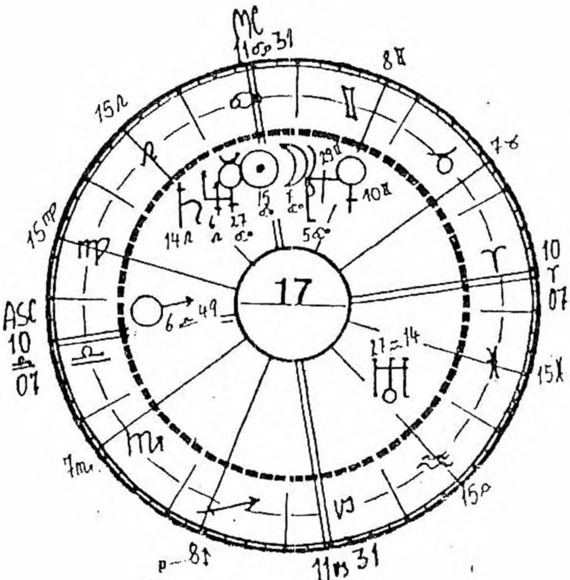

** Raphael's House Tables 0º - 59º

P.L.R.
1941, Nov 24

USA 1

PREC. S. R.
918, Jul 7

The true conjunction with Angles of any Cyclic Chart has to be considered *in mundo,* that is, rising, setting, on the RAMC or the RAIC. In most cases however, the latitude of the planets is so small that it would be a waste of time to follow this procedure with each chart. Instead, with a large number of events and corresponding Lunars available, we try to find the best possible position of the Angles in relation to these planets on an Ecliptical basis. In the present instance, the computed Lunars, with few exceptions confirm :

(a) that the 1776 chart is effective and

(b) the best possible position for the Angles of the computed Lunar figure results from adding 20m (= 5 º in RAMC) to our speculative time, 7h 13m . Adjusted provisional birth time = 7h 33m U.T.

==

Natal charts authenticated in this way can be worked for prediction with the Universal Transit-System [1]

(Transits, Prenatal Transits and Cycles, such as Solar and Lunar Returns). An additional method to verify and adjust a natal chart is by Directions from the Precessed (Sidereal) Solar Return, that is, Progressed/Regressed factors to :

(a) Progressed (regressed) factors of the Solar Return, and /or

(b) Radical factors, with the Secondary measurement - 24 hours of Solar Progression or Regression = 1 year. [8]

Here are the results, taking as a base the verified birth time of <u>7h 33m U.T.</u>

<u>Example 1:</u> The Precessed (Sidereal) Solar Return for 1918, July 7, 16h 48m 10s (Washington), covering revolution and capitulation of the German Reich - 1918, November 9 (11) . **Fig. 17**

The SUN, MOON, MERCURY, VENUS, JUPITER and PLUTO high in the sky near the Midheaven, suppressing MARS on the ASC, is very characteristic of the successful termination of a war.

We notice that the MOON at 6 Can 45 could by Regression reach Radical VENUS 2 Can 22, as four months had passed at the time of the German capitulation, from July until November. (The Moon's average apparent motion by Secondary Progression is one degree a month)

U T Solar	16h 48m (1918, July 7)
MOON re conj. VENUS rad	<u>8h 54m</u>
difference	7h 54m
plus S. T. SOLAR	<u>18h 59m</u>
S T. of regression	2h 55m(or, 14h 55m, Noon Ephemeris)

A glance at the Noon Ephemeris shows for 14h 55m the 5th November 1918. As the actual event occured on Nov. 9 , we have here a shortfall of four days, which corresponds approximately to 16m in time. This shows that our provisional authentication of the USA birth time could possibly be somewhat later. As identifications like these may have orbs of up to three days, we can conclude only that the true birth time, which so far has been adjusted to 7h 33m should be very close to the true time. Final decisions can be taken if other Solar Return examples like this are analysed.

The final rectification with Primary Directions gives a Precessed Solar Return for 1918 on July 7 at 16h 58m 47s (maximum error 30s) **Fig. 17**
MC 11º Can 31', MOON = 6º Can 51'; VENUS rad 2º Can 22'
MOON pro conj MC SR **Nov 13**, 1918 **Event Nov. 11**

Prec. Prenatal Solar for **1944 = 1718,** July 4 11h 01m 12s
Venus pro (27 Tau 34) trine PLUTO rad (27 Cap 34) **Dec. 21**

On **December 15, 1944** the Germans made a concentrated attack on Allied forces in the Ardennes. By **Dec. 20** they had gained a considerable area of territory and the Allied Forces had suffered havy losses in personnel and material. On **Dec 21** this advance came to a standstill, after the weather had improved and the Allies became able to raid German troops and supplies with their Air Force

Example 6 The dropping of the Atom bomb on Hiroshima, Aug 6, 1945
Precessed Solar Return, July 7, 1945 15h 09m **Fig. 18**
SR MOON 20º Gem 02' ; MARS rad 20ºGem 57'
SR Moon pro conj. MARS rad maturing **Aug. 2, 1945** **Event Aug. 6**
SR MOON re trine MC rad (21º Aqu 14) **Aug 7, 1945**

Aspects of other Solar Return planets to Solar-Return or Radical factors are also valid, but precision to a few seconds of arc for all planets involved is indispensable.

As extensively explained in *Prediction* I the Moon in these Progressions and Regressions is acting only as a catalyst. For instance, in Example I, the Regressed MOON conjunct Radical VENUS has to be interpreted simply by VENUS, here symbolizing peace. In Example 6, MARS symbolizes war enterprises. Over 20 examples of this kind have been demonstrated in *Prediction* I in the Chart of Queen Elizabeth II .

These Directions of the Precessed Solar Return, if mainly conjunctions or oppositions to Radical factors, are the best final proof for any rectification performed with Primary Directions in the Topocentric System.

Experience shows that State Horoscopes seldom have as many convincing Primary Directions as the horoscopes of individuals. This is because there is often more than one important date of foundation. On the other hand the relatively shorter distance in time between the Radix and the events gives priority to those State Horoscopes that are closer to the event being analyzed.

For this reason the Directions derived from the Precessed Solar Return, although not giving rectified RAMC results with a precision of ± one minute of arc, have sometimes more weight as a final verification of the rectified chart than the Primary Directions themselves that reflect the events analyzed. This is because the ever true and simple symbolism of these Solar Return Directions and the aspect most frequently appearing - the Conjunction - are convincing scientific proofs for their validity.

The same scientific proof is also evident from the fact that these Directions, although derived from a Sidereal Chart give accurate and convincing results only if applied in the Tropical measurement. These and other phenomena, such as Transits applied to the Radix, should encourage Sidereal astrologers to approach Zodiacal problems in a more realistic way.

The Refined Rectification via Primary Directions in the Topocentric System

Example :

The attack of the Japanese on Pearl Harbour, December 7, 1941,
This was possibly the darkest day in the history of the United States.

Primary directions (Arc 163º 03'):
MC converse square URANUS rad (in Radical 12th House) *
Cusp XII direct sq. JUPITER rad.

Secondary Directions (Angles and Hous Cusps directed with the Solar arc in R.A.)

ASC pro square PLUTO rad *
VENUS pro conj. PLUTO rad *
MERCURY re sesquiq ASC rad
MARS re sesquiq. VENUS rad *
MOON re conj PLUTO rad *

The main and most characteristic planet here is Radical Pluto , which is close to Cusp IX rad (Ecliptic orb 2'; Mundane 4º) =foreign country, abroad. (All directions have admissible orbs)

The refined rectification of our chart gives:
July 4, 1776, 7h 43m 40s UT(+ - 6s). 75º W 10', 39 N 57; **Fig. B**

There are a few very characteristic individualistic indications, which strenghten the validity of this Chart :
NEPTUNE in Mundane conjunction with Cusp 5 (Orb 1º) and in square to MARS. This position of Neptune may be related to the Civil War 1861-1865, as here it symbolizes war with associates.
Traditional interpretation which is not always reliable, would be :
NEPTUNE in Virgo ,its Detriment, on Cusp 5, Ruler of House XI, = allies and friends.
MARS rad near ASC in an almost exact trine to the MC and to the Radical MOON = wars expanding and consolidating the United States' power and influence.
JUPITER in Mundane conjunction with Cusp 2 (orb 1º). - prosperity .

The fixed star **DENEB ALGEDI** (benefic) within 3' of arc in R.A to the RAMC .
DINAH (benefic; 2ºCan 11') conj. VENUS rad(11') .
ALHENA(benefic, 5ºCan 59') conj. JUPITER rad(11')
ALDEBARAN (neutral) rising within 7m of time.

All the above mentioned fixed stars are of the First and Second Order, they are all close to the Ecliptic (small latitude.) and of a benefic character. Fixed stars of the First Order, and perhaps Second Order, if they are very close to a Radical factor, as classified in Prediction III, should be taken into consideration because their importance is evident from their overwhelming frequency. This is very fortunate for our chances against coincidence, a factor that often has been neglected in astrology.

We have to emphasize here that in the Radix, planets in Houses if not close to the Cusp itself, do not necessarily indicate Fate. The reason is that many people born on the same day, have similar House positions and planets - almost every twentieth person, in fact, whereas conjunctions with Cusps are individualistic, and practically without exception produce decisive events during the life time, with an appropriate symbolism.

Apart from anything else, this demonstration of the authentication and rectification of a birth chart should show that the main aim in astrological analysis is the achievement of an overwhelming factor of chance against coincidence.

As is generally appreciated, the best tools for this are Conjunctions and Oppositions. I advise the reader to make similar analyses in the same order as above, starting first with Precessed Lunar Returns.
The following astrological systems and factors are unsuitable for the actual authentication or rectification :

1. Delineations of birth charts .
2. Transits, both postnatal and prenatal.
3. Conjunctions of fixed stars .
4. Partner comparisons .

All the above only support the achieved rectification and should not be used *a priori*

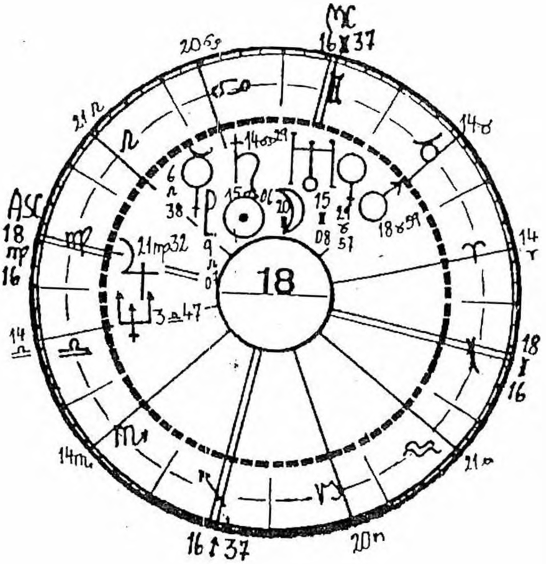

We have already learned that **Prenatal Eclipses** and Lunations that are equivalent to the relevant postnatal ones are much more individualistic because they depend on the birth dates of the Radices in question. To demonstrate this on the USA Horoscope we present Eclipses that have reflected extraordinary events in the United States' history.

<u>The Disaster of Pearl Harbour</u> 1941 , December 7

New Partner Horoscope USA 1 / West Berlin
1607, June 28 9h 29m 20s U.T.
Washington

Another test of well-authenticated birthtimes is a comparison of two Charts and the New Partnerhoroscope [11].

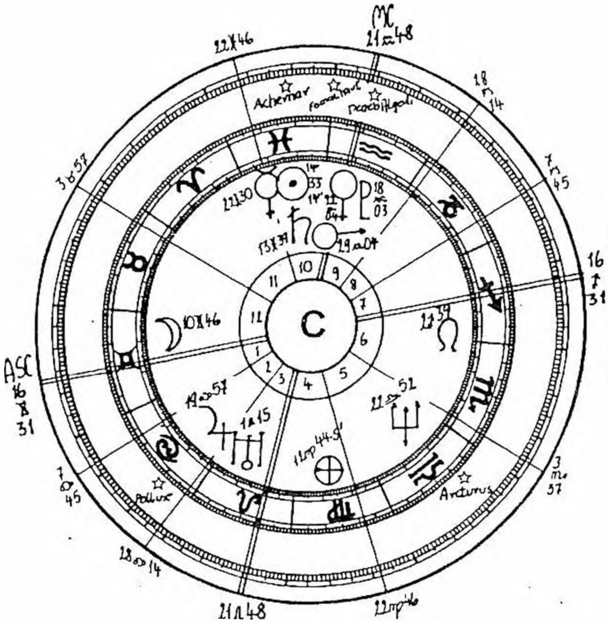

This chart is an unfailing image of any partnership, providing the two Radices have been successfully authenticated. Even with approximate birth times good results can be achieved. In contrast with other unreliable and doubtful methods, which, I found, are often more fantasy than serious analysis, the pattern of the New Partner-Horoscope itself, and the great number of mutual Conjunctions and Oppositions within one degree, permit analysis on purely rational and scientific grounds, defeating the most tenacious adversary of astrology - the coincidence that results in fictions. As an example I have chosen the New Partner Horoscope between our USA 1 Horoscope and the Horoscope of West Berlin. **(Fig. F)**

New Partner Horoscope USA 1/ W. Berlin 1607, June 28, 9h 29m 20s UT computed for Washington. **Fig. 29**
A very active chart with most planets on the East side of the Horoscope, similar to the map of West Berlin.

1. MOON **conj** : IC USA ; MOON W.B. ; ASC W.B.; Opp. MOON USA
2. SUN **conj.** JUPITER USA(12').
3. MERCURY **conj.** : ASC USA ; XI and URANUS W.B.
4. VENUS **conj.** NODE (mean) USA.

A similar combination of Conjunctions as in No. 1 appears when we take the mutual aspects between the two Radices. Besides this there are the following mutual aspects:
ASC USA = 15 Gem 21 ; URANUS W.B. = 15 GEM 23 ; XI W.B. = 14 Gem 15
NEPTUNE USA 22 Vir 24 ; Jupiter W.B. 22 Vir 11.

U.S. politics regarding Soviet Russia and Communism in relation to West Berlin had the most successful results if we compare it with other U.S.A. enterprises, such as Korea or Vietnam. Sometimes it seems to be a miracle (at least for the inhabitants of West Berlin) that this encircled City is still under the protection of the Western World.

Interpretation of the U S A 2 Chart 1789, March 4 15h 41m 17s UT
New York **Fig. C**

The reader will notice that the Angles of this Chart are almost identical with those of the USA 1 Chart.

In this Chart too, the assumption of USA astrologers has been realized - a characteristic Ascendant in Tropical Gemini. It follows, of course, that the Angles of both the 1776 and the 1789 Charts will have almost identical Transits. In this active Chart, with six planets around the MC, the Paran of VENUS and PLUTO with a preceding MARS is the most powerful configuration (Venus and Pluto on the MC in Right Ascension, with orbs under one degree). Undoubtedly these three planets are most characteristic for all sorts of wars, of which the United States fought a considerable number.

The MOON in House XII, near the ASC, supports Geminian characteristics of the United States. To a certain extend it may be regarded as an individual factor because of its quick apparent movement. The SUN, although high in the sky, is weakend by its close conjunction with SATURN. The latter, Ruler of the 8th and the 9th cusp, brought long-lasting difficulties in foreign affairs, with some decisive failures, misjudgements and disadvantageous hesitations, such as at the Blockade of Berlin, the Korean and Vietnam Wars.

The SUN also represents the Head of State, here the President. It is a matter of opinion whether the form of government established by the Constitution has proved to be an advantageous one. At least, during the last decades, it frequently happened that neither the nomination of the candidates for Presidency nor the judgement of the people at the elections (MOON squared by SUN and SATURN) have been under a lucky omen. There might be more troubles with USA Presidents in future because the Ascendant is squared by the SUN-SATURN conjunction. The condition of the SUN (President) in Pisces, symbolizes " Watergate" as well, perhaps, as the Iran-Nicaragua Affair

The possibilities for the Civil War (1861-1865) are symbolized by NEPTUNE (Detriment) in House V and Ruler of XI (associates, friends) in an almost exact quincunx to both the 11th Cusp and MERCURY. JUPITER in II promises some prosperity and (trine SUN- SATURN) a certain stability of the executive power.

The position of NEPTUNE in Libra, with a close trine to the MC, shows an admirable tolerance in religious matters since the existence of this Constitution, and an evident disposition for other Neptunian matters (sects) on an esoteric and superstitious base. The MC in Aquarius symbolizes the United States as an *avant-gard* in matters of technical advance and comfort (VENUS conj. MC).

The position of URANUS is debatable. Although it is not aspected by other planets, a certain strength has to be admitted because of its position near an Angle. As a neutral planet, Ruler of the MC, and in a close sesquiquadrate to the Ascendant (Orb 16'), it might have given some positive impulses in progress, tolerance and in the fight for civil rights. However a principal Direction for the disaster of Pearl Harbour, URANUS converse conj. MC rad, shows that Uranus , if Directed (here to its domicile, the MC) may also produce negative events.

As usual, effective State Horoscopes as well as Horoscopes of famous or infamous individuals show principal fixed stars in Ecliptical conjunctions with Radical planets and Mundane conjunctions with Angles of the chart. In our case, the MC is conjunct DENEB ALGEDI, a fixed star of the second order (orb 1°). The following fixed stars of the first order could have played a certain role in USA history. If they are directed[12] , we get the following maturations, which can be ascertained only approximately because the position of the planets is only established to within one minute of arc :

POLLUX (malefic) conj. JUPITER	matured	1815 approximately.
ACHERNAR (benefic) conj. SATURN	"	1883 "
ARCTURUS (benefic) conj. NEPTUNE	"	1903 "
FOMALHAUT (benefic) conj. MARS		1918 (victorious in World War I).
ACHERNAR (benefic) conj. SUN		1945 (victorious in World War II).

Tropical Solar 1917, March 5, 16h 43m 09s UT Washington - for the declaration of war on Germany. **Fig. 30**

A very active Chart, because 4 planets, characteristic for a war, are high in the sky, Angular on the MC. URANUS sol conj MC rad ; JUPITER sol conj XII rad.

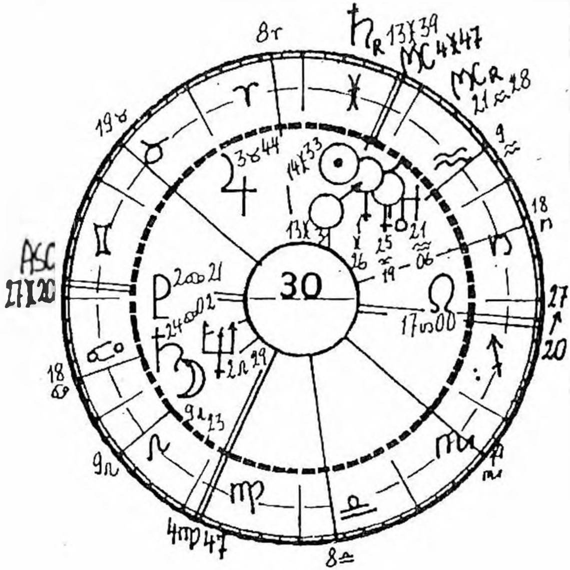

Prenatal Tropical Solar for 1917 - 1661 , March 4, 14h 44m 28s UT **Fig. 30a**

Again VENUS, MARS and URANUS near the MC, as in the complementary chart, Fig. 30 . SATURN on DESC symbolizes the worries that are connected with any war.

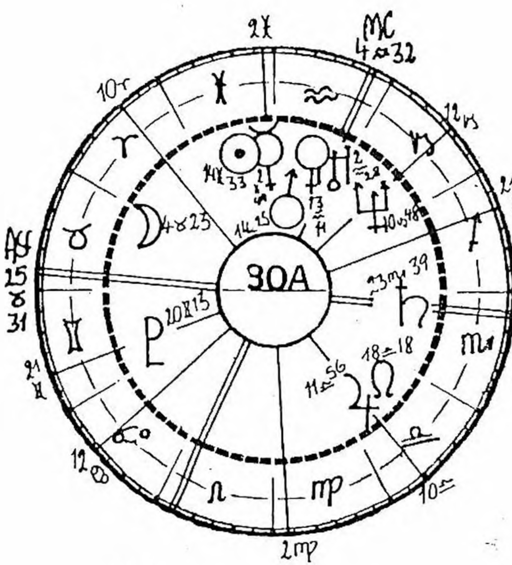

Tropical Solar 1918, March 5, 22h 39m 02s UT **Fig. 31,**
for the victory over Germany in World War I. The characteristic planets here are JUPITER on MC, SUN and MERCURY on the Descendant, covering the event itself and the psychological expression (expansion and power)

Contrary to the statements of some contemporary astrologers, supported by eminent astrologers of the Middle Ages and an overwhelming number of serious present-day astrologers, the writer has to emphazise here that the Tropical Solar Return is very much superior to the Precessed Solar Return (Sidereal Solar Return - SSR) as regards the depiction of the principal events in the Solar Year. On the other hand, if one is using Siderial Solars, the writer recommends analyzing the Demi-Solar Return and the two Quarti-Solar Returns [13] in addition to the main Solar Return Chart. These Charts of shorter duration, and nearer to the event, reflect the native's psychological condition at the operational time and also, of course, events connected with it.

A workable Chart of the Soviet Union.

The writer has carefully studied the history of the Soviet Union and has come to the conclusion that the following important three dates should be worthwhile analyzing for a corresponding Chart :

1. The first meeting of the Parliament after the withdrawal of the *Kerenski* Government. **1917, November 7** (Oct. 25 in the Old Style Calender)

2. Lenin announced the Revolution of the Bolsheviks (Soviet party) in the second Parliament meeting and proclaimed his program. **1917, November 8 .** The majority of Parliament members, Liberals, Menshiwiks and different Socialists left the meeting because of protest. This allowed the Bolsheviks to cease power, at first in Petrograd (Leningrad), and later in the major cities of European Russia. A similar event occured on January 30, 1933, when *Adolf Hitler* as the appointed Chancelor of State, took over the Government and seized full power, although at that time he did not have the majority of voters on his side.

3. The Union of Socialistic Soviet Republics, **USSR,** as in its present form, was created **December 30, 1922**

So far the writer has succeeded only in authenticating the two Charts of November 7 and 8, the latter giving better results.

Besides the Directions, the Precessed Lunar Charts derived from the Radical as well as the Progressed and Regressed Moon gave very Impressiv Maps. It may be regarded as a lucky coincidence that the recorded time (21h EET is almost identical with the rectified one (21h 00m 02 s EET).

as demonstrated in detail in the Map of the United States of America.

In all kinds of Lunar Returns, it is appropriate to analyze only Mundane conjunctions, oppositions and squares, according to the character of the Angles, MC, IC, ASC and DESC.

The writer has frequently stated that in view of a considerable number of Cycles available, our analysis and evaluation of these maps should be restricted to **Angular** Mundane aspects.

Here we have to distinguish between:

a) Single planets being in close Mundane conjunction with one of the Angles. The MC (RAMC) has always the greatest power. Planets that are very close to the Midheaven dominate over those which are on one of the other Angles.

b) More than one Angular planet.

For instance, Saturn in close conjunction with the MC always dominates over Jupiter on one of the other Angles in a Mundane Opposition (IC) or in squares (ASC,DESC) if no other benevolent or neutral planet such as an angular SUN, MERCURY or VENUS supports JUPITER.

Generally speaking, it is the pattern of the horoscope that plays an important role in the nature and efficacy of a Cyclic Chart. This applies also to the delineation of Radices. A concentration of planets in the First and Second Quadrants (X - I - IV) of the horoscope expresses activity of the native, no matter whether the results are positive or negative. In contrast to this, an assembly of planets on the West side of the chart. (IV - VII - X) shows introvert behavior, that is, inactivity. At the same time and in general, notable assemblies of planets above the horizon reflect energy, while many planets under the horizon often indicate weakness of the *psyche* and body, resulting in illnesses. This is aggravated if the SUN is at its weakest point, that is, near the I.C. Of course, illnesses can also be reflected, if, for instance, an assembly of malefics is around the MC, and the benevolent planets occupy the lower part of the horoscope. In this case, however, the illnesses are mostly connected with unfortunate events, like loss of work, etc. On the other hand, an assembly of planets around the MC, with planets in the 9th House is a very powerful configuration, even if some of the planets are not very close to the MC.

It is an old and true rule that a chain of planets, if they are not too distant from one another, gives the horoscope a decisive character according to the symbolism of this planetary accumulation. Such chains or accumulations of planets on other Angles of the chart are also valid, but of less effect. Of importance, also, are configurations where the Angles form a Midpoint between the planets

As demonstrated above, the writer has used the traditional form of computing Parans, that is, measuring the distance of planets on the MC and IC in Right Ascension, risings and settings in Oblique Ascension/ Descension for the geographic latitude, disregarding the Poles of the planets involved.

In the more refined evaluation of a birth chart, it is a logical consideration that the Mundane character of planets depends on their Oblique Ascension or Descension, rather than their Zodiacal position. So far, the writer has not been able to prove either astronomical measurement in Cyclic Charts because the difference between them is too small when considering planets close to the Angles. On the other hand, the traditional form is much less complicated.

The number of effective Lunar Returns for any event varies between four and eight: (1) The Precessed Lunar, (2) its Prenatal equivalent, (3) The Secondary (Natal Quotidian) Lunar, (4) its Prenatal Equivalent and, in special cases (when the event is distant from the Lunar Return date), the corresponding Demi Lunars for all four Charts. Because of this it is sometimes difficult to recognize psychological expressions and the events which could be the cause . For prediction we use the Overlap Method [15].

The following never-failing rule may help the reader :

Events and the strength of Lunars, can always be traced by

(a) a sufficient number of Angular planets and

(b) the closeness of the planets to the Angles.

This is demonstrated with the Lunar Returns below.

A precondition for the realization of main events is, of course, the maturing of Primary and Secondary Directions, during the operational period of the Lunar Returns.

Event: Lenin's death, 1924, Jan. 24

Characteristics of the USSR Chart 1917, Nov. 8 19h 00m 02 UT (Fig. D)

This Radix better suits the turbulent time period which the Bolsheviks experienced in the first years of their dictatorship. It is therefore remarkable that the efficacy of this Chart extended as far as the Summit Conference, December 8, 1987.

The ASCENDANT in 6º Leo12 ' is closely connected with NEPTUNE, rising within 2 degrees and in Mundane conjunction with the fixed star SOUTH ASELLUS.

OA ASC = 92º 42' ; rising NEPTUNE = 94º 32 ; rising S. ASELLUS = 94º 49 '

South Asellus, a fixed star of the third order has shown its efficacy in several horoscopes that have been analyzed by the writer. This is mainly because it has almost no latitude (0º N 04'). In horoscopes of individuals especially in conjunction with Neptune and the ASC (as here), it has been involved in gas poisoning and in fatal infectious illnesses (horoscopes of 1917 - 1919).

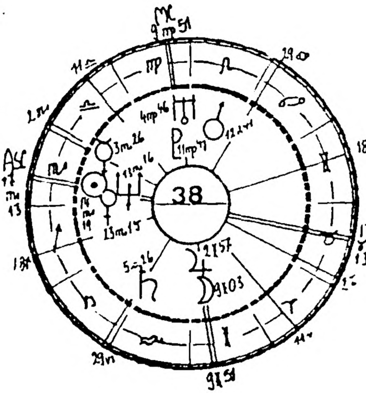

The Soviet State of the Bolsheviks, as can be seen, was obviously "not born under a lucky star." The most negative aspect is perhaps the close square of the SUN to SATURN. This afflicted Sun (head of state) within one degree of the 5th Cusp and in opposition to the 11th, reflects the cruel and unjust executions of loyal communists during the years in which *Jossip Stalin* eliminated his best friends and former supporters.

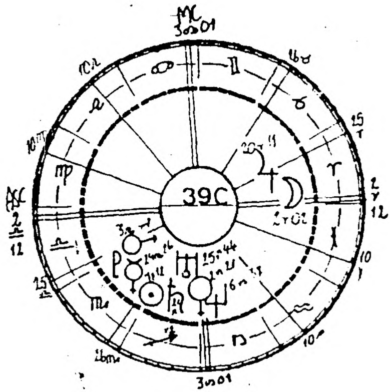

The square of MERCURY (closely connected with the Sun-Saturn aspect) to the 2nd Cusp (orb 15 ') reflects the poor living standard of the Soviet population, especially because Saturn in the First House. is near the 2nd Cusp. JUPITER, the most elevated planet in this Horoscope is in its Detriment, Gemini, and is also in a close square to the Radical MOON. As experience shows, Jupiter in its Detriment often perverted law. In the present case, the population (MOON) have suffered terribly from it.

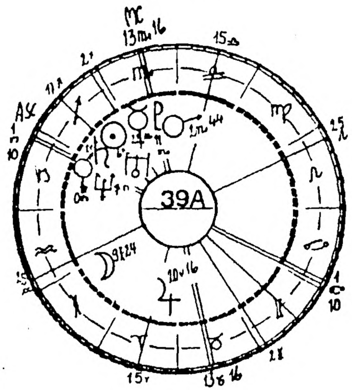

Several millions of Russians were executed or sent to hard labour in concentration camps, from which only a few returned.

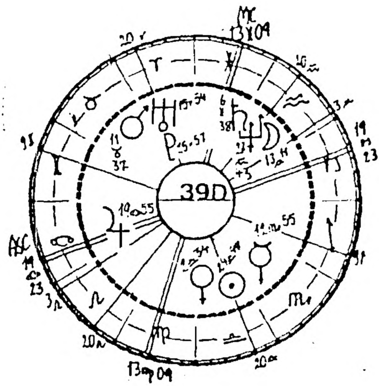

Soviet Russia was a country that had to endure extreme suffering through wars. Not counting the casualities during the civil wars (1917 - 1922), the number of which can hardly be judged, the number of Russian casualities in World War II has been estimated at 13 millions soldiers and 7 millions of the civil population.

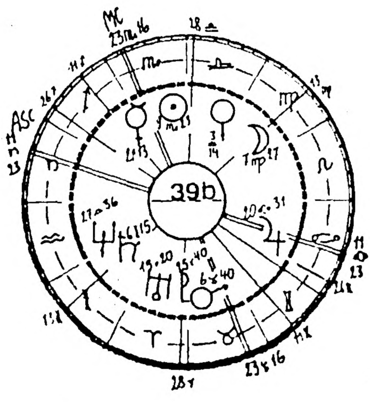

The losses of military personel and civilians for the other nations involved in World War II is estimated at about 13.5 million. The wars of the USSR have been cruel and involved great suffering. They all ended in victory, however, because VENUS (Cusp 6), MARS and PLUTO (Cusp XII) are in close harmonious aspect. NEPTUNE, the dominant planet because of its Angularity, has given a special slant to the character of the Nation.

The State has always been suspicious of other countries and their people, controlling all communication systems to foreign countries. To expect all foreigners to be spies is (or at least was before Gorbachev) a well-known mania of the Soviet State. The authorities' mistrust of their people, and the denunciations of citizens to the police, are also very characteristic of NEPTUNE on the Ascendant.

Secondary Directions Derived from the Precessed Solar Return Demonstrated with a New Simplified Method

The usual computation of exact Secondary Progressions and Regressions[D] using astronomical constants such as , the Universal Time of the Solar Return, the Progressed UT and Sidereal Time, easily causes errors in computation .

The following recently developed simplified method gives results with sufficient accuracy:

Example : The Prenatal Precessed Solar for 1961 (USSR 1 Fig. D)
1873, Nov. 7, 12h 07m 58s **Fig. 40**

Event : The climax of the Cuba Crisis, when former President J.F. Kennedy sent an Ultimatum to Leonid Breshnev, and ordered a blockade of Russian vessels, 1962, October 23

Using any kind of Day Number Tables[4]

October 23 = 661 (638 + 23) the year 1801 taken
November 7 = 311 (304 + 7) " 1800 "
350 : 365. 24 = **0.95827**

S.R. MOON 22° Gemini 19' apparent movement in 24 h = 13° 18'
13° 18' x 0.95827 = 12° 45'
+22° Gem 19'
5° Can 04'
PLUTO rad 5° Can 19'
difference 15' of arc = 7 days
RESULT : S.R. Moon pr conj. PLUTO rad = 30. Oct. 1961

We get an approximate position of the Regressed S.R. MOON if we deduct the above achieved result of 12° 45' from the S. R. MOON = 22° Gem 19'

22° Gem 19'
- 12° 45'
9° Gem 34'

In the vicinity of this result is the Radical position of Jupiter. We have now to refine the result because the apparent movement of the Moon in this time period has changed considerably.

MOON' s motion in 24h (Nov, 6 to Nov 7, Noon positions) =

13º 43' x 0.95827 = 13º 09' 22º Gem 19'

- 13º 09'

9º Gem 10'

JUPITER rad 9º Gem 05' diff. 5' = + 2 days

RESULT: S.R. MOON regr. conj. JUPITER rad = **1962, Oct 25**

Obviously this MOON -JUPITER conjunction is associated with the Cuba Crisis, which has to be judged as disadvantageous, at least for the USSR, although peace was preserved. The writer has already repeatedly stated that the Dignity and Fall of planets in Radices can only be evaluated in the traditional way if we have to deal with individuals who made history, or with State Horoscopes. In our USSR Chart Radical Jupiter is in its weakest Sign, Gemini, squared by the Radical MOON. This MOON/JUPITER square is repeated in our demonstrated Solar Return (MOON 22º GEM - JUPITER 25º Virgo). Jupiter is in Virgo, a Sign with which it does not associate well. In other words, Jupiter has a very pure quality here in all its combinations.

This is an illustrative example of *Jean Baptist Morin's* theories. Jupiter afflicted, in unfavourable Signs may reflect unfavourable events. The writer has frequently given examples of this (Eichmann, Hitler).

In the same way, Solar Directions may be computed with other maturing planets, using the multiplier 0.95827 (350 / 365.24)

Sometimes it is more appropriate to make a reverse computation. This can be recommended for all cases where simply the date of maturation is required.

Example : Progressing S.R. Mars (18 Cap 09') to Mercury rad.(18º Sco 51 ')

18º 51' minus 18º 09' = 42'

Motion of MARS in 24 h = 45' ; 42 / 45 x 365.24 = 341

341 + 310(Nov. 7) = 651 = approx. **Oct. 13, 1962** (1872 ,prenatally).

This date falls in the period of the Cuba Crisis and may have reflected the installation of the Russian rockets. As all planets move much more slowly than the Moon, for exact dates computations to " of arc are indispensible.

Refined method :

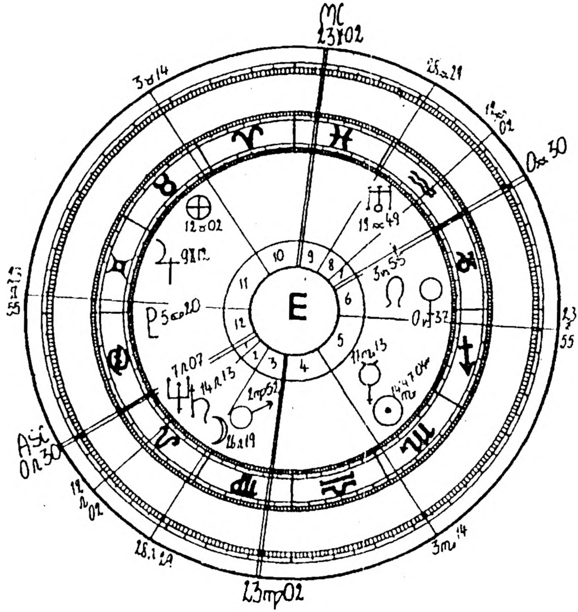

S.R. MARS 18º 09' 02" Capricorn; daily motion 45' 00"
MERCURY rad 18º 50' 30" Scorpio ; Diff. 41' 28"

41' 28" : 45' 00" x 365.24 = **337 days**

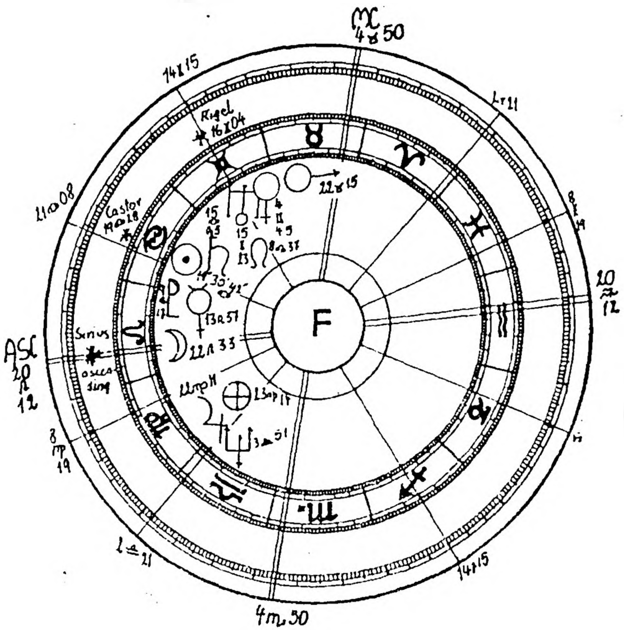

337 + 310 (Nov. 7) = 647 = **Oct. 9, 1962 = MARS p sext. MERCURY rad**

The Precessed Prenatal Solar does not show sufficient characteristics as regards this event, except the afflicted JUPITER close to the Descendant and the MOON in a low position on the IC. Because of these positions and aspects the above demonstrated MOON/JUPITER Direction has special weight. MERCURY, here in its Detriment (Sagittarius), is in opposition to Radical Jupiter (detriment). A further link for the negative outcome of the MARS/MERCURY and MOON/JUPITER Directions.

Quite impressive charts have also been achieved with the **USSR Chart of November 7, 1917. Fig E .** About 40 charts analyzed for main events, and a considerable number of Primary Directions, gave an authentication and secure rectification of this State Horoscope, which represents the Proclamation of the Russian Revolution. For reasons of space it is not possible to include here a similar analysis as with the Chart of Nov. 8 , The reader is invited to analyze this Chart with the Summit (disarmament agreement), December 8, 1987, 19h 02m 25s - 19h 05m 50s UT, for Washington.

The vitality of West Berlin is persuasively shown by the assembly of all eleven Horoscope factors (Sun - Node) in the East half of the Map. Its successful fight up to present for its independence is symbolized by MARS high in the the sky in the 10th House.

As with most rectified horoscopes of V.I.P.'s (individuals), the Radix of West Berlin (Fig. F) shows a remarkable number of effective prominent fixed stars, which have no doubt supported the City in a most benefic manner. A glance at the Horoscope shows many afflictions such as MARS in close square to the ASCENDANT and the MOON, while JUPITER in Virgo and at a weak point of the Chart - in the middle of the 2nd House - is ameliorated only by its conjunction with the Part of Fortune. The close trine of MARS to JUPITER (orb 3') is only small help because of the pure quality of both planets.

These principal features, and the permanent threat of Soviet Russia, encouraged astrologers to predict a very short life for West Berlin.

They have all been mistaken, however. The presence of prominent fixed stars in conjunction mainly with Angles, the Sun and the Moon produces Fate in the pure sense, especially in the horoscopes of States and politicians. The Radix of West Berlin is one of the examples where benevolent fixed stars have activated this critical but extrovert and vital Chart (all planets on the East side of the Horoscope).

Close conjunctions of fixed stars with main characteristic factors in the Radix of WEST BERLIN :

SIRIUS rad, benefic of 1st order	rising	2h14m 42s (OA minus90)
	RAMC rad	<u>2h 10m 12s</u>
	ORB	4m 30s

RIGEL rad , benefic of the first order	16º 03' 41" Gemini
URANUS rad	15º 22' 24" Gemini

This conjunction happens to be on the 11th Cusp (House of friends and supporters). Together with the Sign GEMINI and URANUS this may be associated with the United States of America.

CASTOR rad, neutral, of the first order	19º 28' 06" Cancer
SUN rad	19º 30' 42" Cancer

The Blockade of West Berlin, which was the first probation for the City, shows the maturation of Castor conjunct Sun within 8" of arc .

CASTOR precessed	19º 30' 34" (June 23, 1948)
SUN rad	19º 30' 42"

This conjunction symbolizes activity, although the SUN is on the 12th Cusp (enemies, deception).

The MC of West Berlin coincides with the IC of East Germany. 180-degree links of this kind are fortunate only in ASC- DESC combinations in special cases.

The Blockade of West Berlin 1948, June 23
was preceded by a monetary reform in both parts of occupied Germany.

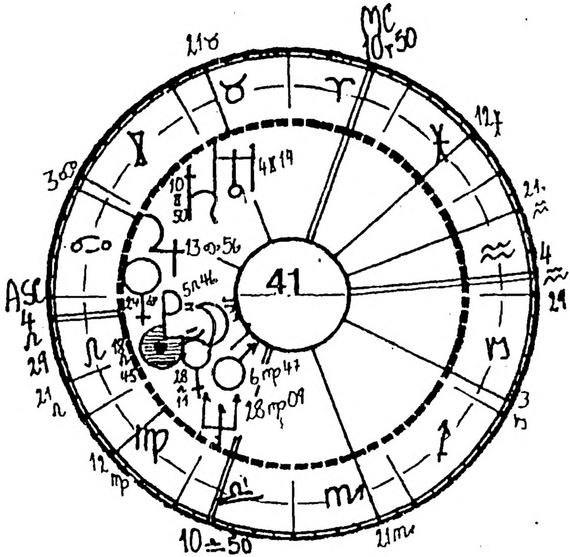

Prenatal Solar Eclipse of 1942, August 12, 2h 27m UT, corresponds to June 13, 1948, and went into operation 10 days before the event. **Fig. 41** The Eclipse falls on the Radical Ascendant of West Berlin, which in general promises an event of importance. PLUTO on the Ascendant of the Eclipse is very characteristic, as the event opened a new economic era.

Tropical Solar 1947, July 12 17h 30m16s UT (not reproduced)
URANUS may be regarded as the most prominent planet, descending within two degrees, and symbolizing the suddeness of the event. To some extend it also symbolizes the support of the United States (Gemini). SATURN near Cusp 8 is conjunct Radical PLUTO within 6' of arc and symbolizes the Blockade. The Angular MOON, conjunct the Radical MC (23') and very low in the Horoscope, near the IC, reflects the frustrations that the people of West Berlin suffered for almost a year. MARS, 8ºGem10 ', Cusp 6, here the agressor (Soviet Russia which caused the Blockade), is conjunct ALDEBARAN, 9º 03' 20"Gemini, a violent fixed star of the first order.

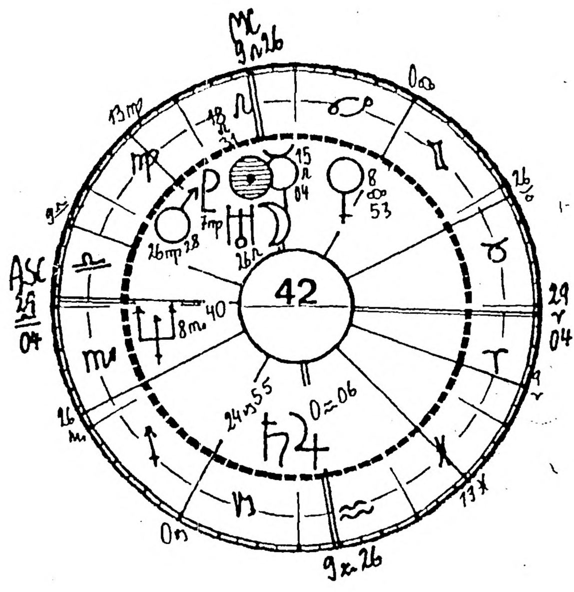

• **The Wall** • 1961, August 13 - the most negative and sad event in West Berlin's and West Germany's history.
For West Berlin the most characteristic Cyclic Chart is the

Solar Eclipse 1961, August 11 10h 35m 43s UT **Fig. 42**,
which started operating just two days before the event. Again, as in the Prenatal Solar Eclipse for the Blockade, the occultation occured on the Radical ASC of West Berlin's Chart. The MC is conjunct Radical PLUTO within 10 ' of arc. In the Chart of East Germany, which has similar coordinates to West Berlin, this Eclipse falls on MARS (18º Leo 37 ') and PLUTO (17º Leo 46).
This is another example of the immense efficacy of Solar Eclipses if they appear in conjunctions with Radical factors, especially with Angles, as in the present case.

PREN SOL ECL
1942, AUG 12

WEST-BERLIN

SOLAR ECLIPSE
1961, AUG 11

The Horoscope of West Germany (F.R.G.) does not show any afflictions that could leed to an extreme destiny, either successful or disastrous. The most powerful celestial bodies here are the Angular planets MOON, JUPITER and NEPTUNE. It was the authority (SUN) of East Germany (**Fig. H**) that so often obstructed a peaceful coexistence of both States. The SUN of West Germany in House VIII has always failed to show sufficient energy and resistance against the influence of other political powers. This was sometimes aggravated by an unsuitable or unnecessary acceptance of USA politics. Nevertheless, the almost exact trine of the Sun to Jupiter (Orb 2°) has enhanced the importance of this State among its associated European countries.

The NEPTUNE /MOON opposition from ASC to DESC has to be regarded as unfavourable. There is no doubt that the Moon and Neptune of West Germany, with their close squares to the Sun of East Germany, have caused many problems and tensions in the relationship of the two States. The effect is, however, softened to a large extend by harmonious aspects of MERCURY, VENUS and PLUTO. MERCURY in its Domicile, Gemini, high in the sky and on Cusp IX, because of its conjunction with VENUS has to a great extend contributed towards West Germany's wealth and its achievement of first place in the economic power of the European Economic Community. As with the Radix of West Berlin, where friendship and protection are symbolized by Cusp XI, Uranus and Gemini, the 9th Cusp here with Mercury and Venus also in Gemini is playing a similar friendly role in the relationship with the United States. This is clearly shown, especially in the 1776 map of the U.S.A.

The Horoscope of East Germany (G.D.R., **FIG. H**), because of its SUN high in the sky in the 9th House, has a greater power than the Sun of West Germany in the 8th House. However this Sun is not as favourable as it might look at first glance. The very close conjunction of the SUN with NEPTUNE obstructs the activities of this State in relation to foreign countries, and makes it dependent on the East Block and Soviet Russia. (The writer is not yet persuaded that Communism is represented by NEPTUNE alone, which is a common assumption.)

As we all know, most communist-oriented States in the world lack the democratic rights that we enjoy, living in the free Western World. The suppression of the people is very persuasively shown by the SUN (authorities) suppressing the MOON (people) below the Horizon and near the I.C. The close conjunction of the SUN/MOON (Full Moon) opposition with the Mean Node indicates that there had been an Eclipse of the Moon the very same day (without any significance for the foundation of this State).

Tropical Solar 1961, May 23, 16h 44m 21s UT, for West Germany. **Fig. 44**
Here the main and most effective planets are MARS and URANUS, high in the sky on either side of the MC. NEPTUNE on the ASC symbolizes the deception and fraud that characterized this event.

Lunar Return 1961, Aug 1, for West Germany (not reproduced)
MC 21º Leo,URANUS 25º Leo ; ASC 8º Scorpio, NEPTUNE 8 Scorpio 35.

DESC 9º Taurus, URANUS = 11º Taurus

The Moscow agreement, 1970, August 12, was a serious step forward in the relationship between Soviet Russia and West Germany.

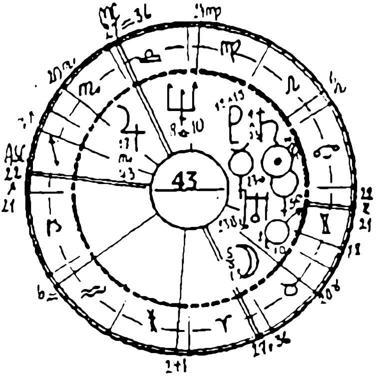

The Prenatal Tropical Solar for West Germany 1970 = 1928, May 23, 13h 03m 06s (not reproduced) shows an assembly of planets on both sides of the MC with characteristic Midpoints. MC = 24 Gem 17, MERCURY 22 GEM 19, SUN/PLUTO 23 Gem 51, MOON/VENUS =24 GEM 15

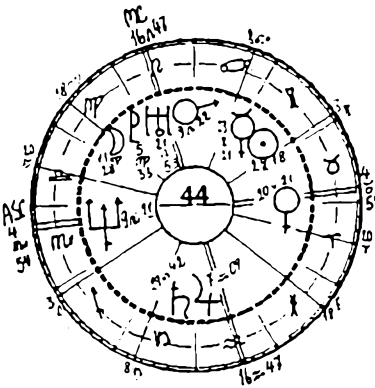

The Lunar for West Germany 1970, July 24, 3h 34m U.T. (not reproduced); MC 2º Aries; MOON (precessed) 14 Aries 05, IC 2º Libra; VENUS 13º Virgo, PLUTO 25º Virgo, URANUS 5º Libra, Jupiter 27º Libra: ASC 27º Cancer, SUN 1º Leo.

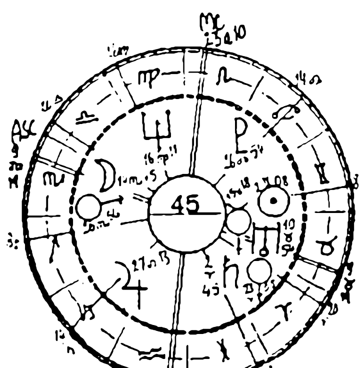

The **Demi-Lunar** August 7, 16h 40m U.T., **Fig. 46,** preceding the event by 5 days, shows Jupiter at 29º Libra, high in the sky on MC 5º Scorpio

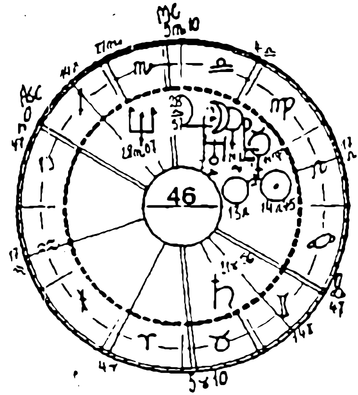

Four Power Berlin agreement 1971, September 3 12h U.T. **Fig. 47**
The Transit chart for this event, computed for Berlin, shows almost exact Mundane angular Conjunctions of PLUTO (MC), JUPITER and NEPTUNE on ASC. Consequently these three planets are also in Parans. While the assembly of planets on both sides of the MC show a peaceful settlement (VENUS). NEPTUNE on the ASC detriments this Chart in so far as the achieved Agreement left a good deal of unanswered questions concerning the status of Berlin.

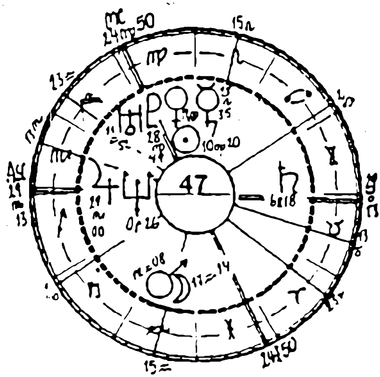

Prenatal Tropical Solar for West Berlin, 1971 - 1927, May 24 **Fig. 48**
Jupiter close to MC and conjunct Uranus reflects this Agreement, which can be interpreted as unexpected because of the long-lasting divergences of views.

For the two wins of the **Soccer World Cup**, the following characteristic Secondary Directions had been noticed:

11. Soccer World Cup (1) 1978, June 24

ASC p sextile JUPITER 7'* MARS p conj. JUPITER 7'*

12. Soccer World Cup (in Mexico) 1986, June 29

IX re trigon URANUS 5' * (IX = foreign country)

As pointed out in a previous chapter, in State Horoscopes victories, defeats and peace treaties, are events that usually show the most characteristic and dynamic astrological reflections. This is logical as these events concern the *psyche* of the whole nation, whereas even catastrophies where a considerable number of people are involved are more or less confined to the place of the happenings. To an extend, a certain dynamic can also be expected when the death of a monarch or statesman occurs.

In the case of catastrophies , Cycles are always more impressive if they are computed for the place or territory of the happening. Let us analyze with Primary and Secondary Directions the Anglo-Argentinian war in 1982, the dates of which are given above.

The most characteristic Directions are those with Mars (4) associated with the MC, ASC, VENUS and PLUTO. The sextile of the Regressed MC to NEPTUNE, perhaps symbolizing a war at sea, in connection with the accumulations of the Directions, unfavourable throughout, may be regarded as negative too.

The writer has repeatedly stated that soft aspects like trines and sextiles involving malefics, often produce negative results, especially if, as in this case, the malefic (here Neptune in Sagittatarius conjunct the 3rd Cusp and square PLUTO) suffers poor Cosmic conditions in the Radix.

1. The Tropical Solar 1981/82, July 9, 13h 18m 55s UT **Fig. 49**
In this Chart the most significant features are the aspects of planets to Radical factors and the Paran of MARS (high in the sky) opp. NEPTUNE in IV, symbolizing the loss of the War at sea. S.R MARS square Radical PLUTO (8') (see Secondary Direction Regressed MARS semisquare PLUTO); URANUS/NEPTUNE - Midpoint MC/IC .

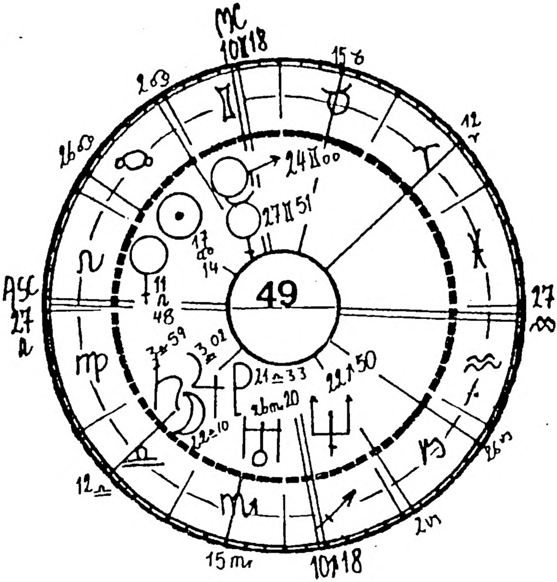

1a. The Prenatal Tropical Solar covering the Solar 1981 /82. **Fig. 50**
1651, July 9, 19h 35m 51s UT, shows a number of Solar planets in aspect to the Radix. The MOON, MARS and SATURN in a T-Square afflict the Radical MC axis as well as the SUN and MOON, with orbs around one degree. The close Solar conjunctions of VENUS/PLUTO (war) and URANUS/NEPTUNE are also characteristic.. Here, NEPTUNE, with an orbital period of 164. 8 years, in an exact quincunx (3') to the SUN, has almost reached its Radical position in 165 years (1651 - 1816). The same applies to NEPTUNE in the corresponding Tropical Solar above (Fig. 49). Here Neptune touches the 3rd Radical Cusp (opposite Cusp 9) within 43 ' of arc.

2. The MOON Eclipse of 1982, Jan. 9, 19h 53m UT (not reproduced) is also remarkable. This Eclipse is within 1 ' of arc in conjunction with the Radical Moon and totally obscurs the SUN/MOON opposition axis in the Radix. Besides this we observe a descending URANUS and PLUTO conjunct the Radical DESCENDANT (1º).

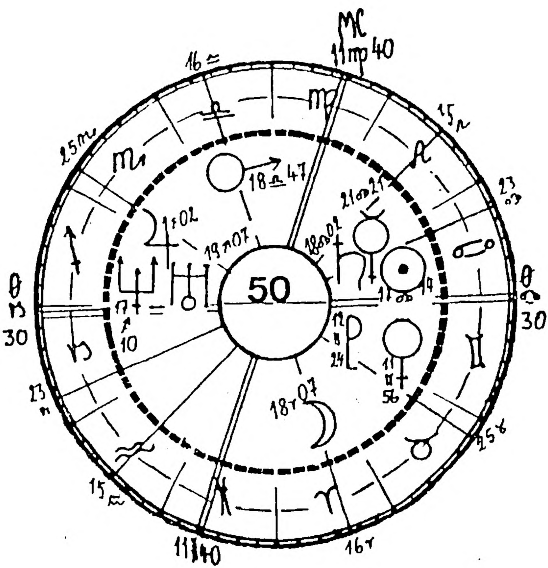

The writer's experience to date indicates that the effectiveness of Moon Eclipses is limited to those that precede the event by not more than 28 days, while the efficacy of Sun Eclipses extend to a full Solar year. It is a matter of research to decide whether Moon Eclipses may exercise a longer period of efficacy than the period of one full Moon circuit.

3. Prenatal Solar Eclipse 1650, October 25, 4h 13.5m UT **Fig. 51**
corresponding to the postnatal date of 1982, March 23.
The Eclipse falls on Radical JUPITER (orb 1.5 º), which at first seems encouraging. However, the only success Argentina had, was the occupation of the Falkland Islands on April 2. The failure, resulting in a complete defeat, is clearly reflected by the following unfavourable indications:
The Eclipse is in the Chart's most unfavourable position, that is, near the IC. VENUS, URANUS, NEPTUNE (all three planets almost exactly in a semisq to Radical JUPITER) are conjunct in a Paran and in opposition to PLUTO (Paran). Except for rising SATURN and PLUTO, the planets under the Horizon symbolize the weakness of the State.

4. **Precessed Lunar,** 1982, April 1 ; 22h 57m 20s UT **Fig. 52**

(Precision method)

This chart, preceding the event by one day, shows the preliminary successful occupation of the Falkland Islands. The MOON, high in the sky, is conjunct the MC, and JUPITER is rising (both within 2 degrees), which of course shows undoubted success in an enterprise. URANUS has reached its Radical position after two revolutions (1816-1882)

5. **Precesssed Demi-Lunar,** April 16, 1982, 3h 20m 21s UT

(Precision method, not reproduced)

Here the impending danger of war, and the British Navy on its way, is reflected by the MARS/PLUTO Midpoint = MC, and SATURN conjunct MC, with all three planets close to the Midheaven. The MOON is in House XII near the ASC, while the SUN, on its weakest point, the IC, is suppressed by mighty PLUTO high in the sky.

6. **Prenatal Precessed Demi-Lunar 1650,** Sept. 5 21h 10m UT **Fig. 53**

corresponding to postnatal date 1982, May 12.

The following Parans characterize the dynamics and the nature of this Chart : Parans of SUN, URANUS, NEPTUNE and PLUTO, close to the Angles, within an orb of one degree.

7. **Precessed Demi-Lunar** 1982, May 26 12h 27m 50s UT **Fig. 54**

(Precision method)

Here VENUS high in the sky and conjunct the Radical ASC , appears to promise a successful enterprise. However it is in Detriment in Aries and is afflicted by the close opposition of Angular Pluto (orb 27 '). SATURN is close to the IC, and NEPTUNE to the Descendant . In addition, MARS/PLUTO Midpoint = Midpoint MC/IC.

8. **Precessed Lunar** 1982, June 9, 17h 01m UT (not reproduced)

MARS descending within one degree of Oblique Descension.

8a. **Precessed Prenatal Lunar** 1650, Aug. 9, 13h 29m UT (not reproduced)

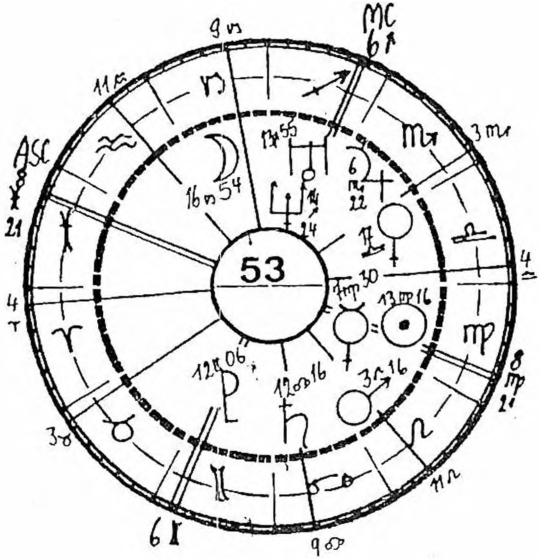

Complementary to 8 :

MC 11º Cancer, SATURN 9º Can 32 ', MARS 15º CAN 48 ' - the defeat.

PARAN MOON(IC) /MARS (opposition, orb 1.5º)

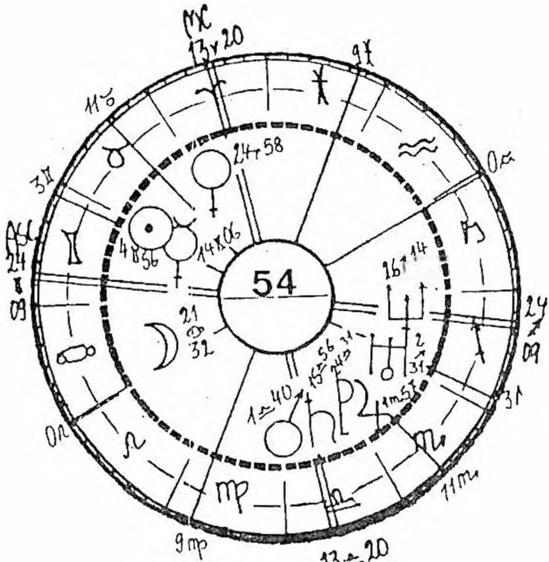

This retrospective analysis should be an example of how to use Cyclic Charts for prediction. The writer maintains that Argentina's enterprise in the first days of April 1982 was condemned to failure from the beginning, not least because the demonstrated Charts featured an accumulation of Directions with an undoubted negative character. The four afflictions with MARS could not possibly be misjudged.

D.P.P.L.R
1650, Sep 5

ARGENTINA

D.P.L.R.
1982, May 26

In all political developments that cover a longer, sometimes unforseen period of time, the writer analyzes the path only of the "slow" planets, from Jupiter to Pluto. These give indications that sometimes support inferences drawn by the method above.

The following longer lasting Transits were decisively involved in the demonstrated events

A) Postnatal Transits (covering the period April 1 to June 15, 1982)
PLUTO 26 Libra -24 Libra, and powerful because retrograde (that is slow in motion), was in the vicinity of the radical Ascendant during the whole period.
SATURN in slow motion (retrograde) squared the MC, SUN and MOON.:

B) Prenatal Transits (Oct. 18 - Aug. 3, 1650, corresponding to the postnatal period (A).

Here, the conjunction of URANUS and NEPTUNE in the neighbourhood of their Radical positions has produced Parans with the mutual opposition of PLUTO. SATURN was conjunct the MC and the SUN (both radical), on decisive days during the events.

The confirmed rule that all astronomically correct astrological systems have to be measured in the Tropical Zodiac if applied to the Radix becomes particularly evident in State Horoscopes with a long history. In the present instance the analyzed events, 165 years after the birth of the State have a Precession of 2º 19' of arc. Applying the Sidereal measurement, all characteristic Transits would be out of any reasonable orb.

I invite the astrologers from Argentina to use this consolidated chart for tracing time periods, where accumulations of Directions require confirmation with corresponding Cycles. This, of course, also applies to the other State Horoscopes which have been sorrowly authenticated, rectified and verified.

Interpretation of the Planetary Symbolism in Political Astrology

SUN : Power, authority, head of State.

SUN/MOON : The relationship of State authorities to the people.
SUN/MERCURY : Contracts, agreements, settlements.
SUN/VENUS : Peace settlements with the predominance of the State involved.
SUN/MARS: Activity, agressiveness. The outcomes of enterprises often depends on JUPITER (success) or SATURN (failure, defeat).
SUN/JUPITER : Successful activities throughout.
SUN/SATURN : Inactivity, suppression. Death of heads of State, mourning.
SUN/URANUS : Sudden or unexpected activities of the State itself or of hostile elements, the outcome of which depends on other planets.
SUN/NEPTUNE : Intrigues against authorities (head of State). With MERCURY corruption of authorities, fraud (Watergate). In general, also, dubious occurrences that cannot be satisfactorily explained (Iran Affair).
SUN/PLUTO : Seizure or loss of power. Changes in the construction of the government(take-over by others), with MARS by force, with JUPITER, legally.

MOON : The populace, Social affairs.

MOON/MERCURY : Plebiscites, demonstrations, assemblies.
MOON/VENUS: Social affairs, Charity (sometimes with NEPTUNE), donations, culture (music, arts).
MOON/MARS : Popular uprising (URANUS), aggressive demonstrations, with casualities if SATURN involved.
MOON/JUPITER : Popularity, Jubilees, celebrations (V-Day).
MOON/SATURN : Frustration, lack of food or other supplies. Also noticed in deaths of women in politically important positions (Evita Peron).
MOON/URANUS : Uprisings, public protests.
MOON/NEPTUNE : Confused situations, depending on other planets involved. Bankrupty if Mercury is involed. With the Sun, Scandals.
MOON/PLUTO : Massacres, the beginning of popular revolts.

MERCURY : Communication, trade,diplomatic notes.

MERCURY/VENUS : Trade and peace agreements.
MERCURY/MARS : Diplomatic tensions. Breach of contracts or treaties.
MERCURY/JUPITER : All sorts of agreements.
MERCURY/SATURN : Long lasting negotiations with negative results in most cases. Here, the participation of other planets is of decisive importance (Jupiter, success; Pluto, breaking off).
MERCURY/URANUS : Strange, unexpected outcoms of negotiations, coloured by the nature of connected planets.
MERCURY/NEPTUNE : Scandals, corruption,bancruptcies.
MERCURY/PLUTO : End of treaties, according to the symbolism of other planets involved.

VENUS : Peace, comfort. Public consumption.

VENUS/MARS : Outbreaks of wars
VENUS/JUPITER : With MARS, peace after successful war enterprises, also successful battles. With Mercury advantageous negotiations and/or agreements. With Saturn , if Venus and/or Jupiter dominate, victory after hard struggle.
VENUS/SATURN : The hard aftermath of wars. All sorts of privations.
VENUS/URANUS : In Political astrology the interpretation of this combination usually depends on the involvement of other planets. With MARS, sudden unexpected entanglements in wars; the winnnig of battles (Venus dominant), or their losses (Mars dominant).
VENUS/NEPTUNE : With SATURN, epidemics, food poisonings. With URANUS, radiation poisoning (Chernobyl).with MERCURY, money and bank crises, with JUPITER, social welfare, charity .
VENUS/PLUTO : Outbreaks of wars; final collapse at the end of hostilities.

MARS : Activity, impulsiveness, abuse of power, lack of consideration, recklessness.

MARS/JUPITER : This is a very frequent combination for national success in important sporting competitions (World soccer Cup). It may also symbolize successful military enterprises.
MARS/SATURN : A combination of general misery, according to other planets involved.
MARS/URANUS : Air crashes, railway accidents, explosions, etc.
MARS/NEPTUNE : Strikes by the work force.
MARS/PLUTO : Armed uprisings, the outbreak of hostilities.

JUPITER : Authority, law and order, expansion, administration.

JUPITER/SATURN : Without the domination or interference of other planets, this is a competition between two mighty planets. In Cyclic Charts the domination of either one is decisive for the results (according to the symbolism of other planets involved). Success (dominating JUPITER) or defeat (dominating SATURN) after a long and hard struggle (Presidential Elections).

JUPITER/URANUS : Lucky escapes, relief after tension

JUPITER/NEPTUNE : Church matters, church authorities

JUPITER/PLUTO : Gain of territory (in USA history). Successful termination (some times the start) of all sorts of projects and enterprises. Succession (for heads of States).

SATURN : Stagnation, frustration, restriction, hunger, unemployment, mourning.

SATURN/URANUS : Sudden and unexpected shortages or catastrophies.

SATURN/NEPTUNE : Long-lasting infectious epidemics.

SATURN/PLUTO : The begining of all sorts of long-lasting privations.

URANUS : Sudden changes, reforms, resistance, rebellion, inventions.

URANUS/NEPTUNE : Flood disasters.

URANUS/PLUTO : Earthquakes.

NEPTUNE : Lack of purpose, disillusion, desultoriness, matters of religion.

NEPTUNE/PLUTO : Chaos in all its possible forms. (After strikes, uprisings, etc.)

Most of these examples convey the embodiment of the event with just one pair of planets, but to determine the full nature, we must often introduce a third or fourth planet. For instance, a strike may be characterized by MARS/NEPTUNE, but it might be a sudden one (URANUS) or long-lasting (SATURN). It could be the strike of postal workers (MERCURY).

However, it is important to note that what has been said above should not be taken as a fool-proof recipe, but as a guide to the clear understanding and interpretation of combined planetary symbolism, which is in reality nothing more than the expression of the psychology of the event.

- Houses in the Topocentric Domification System -
Their Significance in the Radix and in Connection with Directions

MC and ASC : General Significators for all important events.
IC : Domestic affairs, Deaths of rulers of states.

DESC : Partners, agreements. With JUPITER legislations, with VENUS and/or MERCURY, peace treaties, agreements .

X : Rulers of States, State authorities (MC) .

XI : States associated in friendly partnership. Foreign States that help and support (West Berlin's relation to the USA).

XII : Secret ennemies, mistrust (USSR - USA), intrigues, espionage, epidemics. With JUPITER, church matters.

II : Financial matters.

III : Communication, transport (post, telegraph, railways etc.). Propaganda, elections.

V : Associated countries that are closely connected in Federal Unions or Confederations. (USA-USSR-FRG).

VI : Civil Servants, lower administration, environmental factors, pollution, etc.

VIII : Taking posession of territories (or losing them) through inheritance (as often happened in the history of Europe). General losses of property, unfavourable monatery reforms, inflation. With JUPITER and/or the SUN, commemoration days, memorial services.

IX : Foreign countries, and activities there, such as wars and sporting events.

PREDICTION in PRACTICE
Possibilities and Limitations

Generally speaking, the same astrological tools should be used in forecasts as in the analysis of past events demonstrated above. A reliable forecast of coming events can be quite successful with so-called speculative events. This applies to personal as well to as mundane astrology.

In speculative forecasts we distinguish between -

(a) Events that are fixed beforehand to known dates, and

(b) Events that could be expected according to previous occurences.

Under (a) fall all sorts of elections, Summit conferences and important sporting events such as the World Soccer Cup.

On the other hand, if astrology is used as a guide, it would be possible to fix advantageous dates for enterprises such as, for instance, the start of space ships and missiles , or the beginning of negotiations .

This form of forecast was successfully exercised by the ancient astrologers who, in those times (Assyria, Babylonia, Egypt), had the benefit of the confidence of their rulers.

As to present, there have been rumours that astrologers were involved in fixing the day for the invasion of the Continent by the Allied Forces (D-Day, 1944, June 6).

Under (b) fall forcasts for the outcome of negotiations, a task that is more complicated because the development and duration of such processes cannot be fixed beforehand. [12] .

More risky, and perhaps from the ethical point of view objectionable, are forecasts that relate to the deaths of V.I.P.'s. , especially of Rulers of States. This is possible where old age or illness allows a speculative prediction, particularly if there are other rectified charts of relatives available. Analysis of the horoscope of the individual concerned, together with the chart of the State involved, offers a high probability of success.

As a practical example of (a) the writer cites his successful analysis preceding the Disarmement Agreement between *President Reagan* and *Mikhail Gorbachev* .

The estimated date for the Disarmement Agreement, 1987, Dec. 8 , 17h U.T. (Noon, Washington) taken.

Final Remarks

In the present era, the improved techniques in astrology, last but not least through the invention of computers, should enable the astrologer to approach all astrological problems in a different, more progressive way.

In this respect we would like to draw the reader's attention to considerations which, as far as possible, eliminate coincidence and fiction. Unfortunately, as explained in *Prediction* III, our Century has produced a lot of fictional astrological systems with a superfluous number of factors that cannot be controlled.

The simplest, but highly effective tools for every astrologer should be a comprehensive application of the Universal Transit System, where the various Precessed Lunar Returns, especially, are of great importance because they are easy to compute and their application and interpretation does not result in too many failures. As repeatedly stated, the evaluation of these Cycles depends solely on planets that are near the Angles. The Interpretation of Transits and Cycles is explained in *Prediction* I.

The effectiveness of Precessed Lunar Returns, in particular, is obvious enough to neglect any statistical considerations. However, there are two simple ways to prove the efficacy of these charts. Apart from astrological indications, which show the appropriate planets on the Angles significant for an event, or corresponding psychological experiences, we can appreciate that the appearence of planets near the Angles of a Cycle are not a mere matter of chance. We invite the reader to compare the Cycles demonstrated in this book with ordinary charts of average individuals. Only in very exceptional cases will there be such impressive charts, in view of characteristics and dynamics.

To prove these Cycles in a serious statistical way, I recommend a method that we may call the substitutional method. It does not require any preliminary considerations about chances. For instance, we may mathematically compare 50 effective cycles with 50 birth charts of individuals, and exploit statistically the frequencies of planets near the Angles with their varying distances.

Or, to exclude any doubts of manipulation, we could replace the birth charts with 50 dummies, which result from choosing for all cycles corresponding dummy charts, and which, for instance, are separated by one month from these Cycles.

EXAMPLE : Precessed Lunar Return 1988, May 25, 22h 25m 46s
Corresponding dummy chart = 1988, June 25, 22h 25m 46s

The statistical evaluation has to be performed with a Contigency Table analysis and the Chi-Square test in order to achieve a favourable Probability Factor. We invite the experts in statistics to make such an attempt on effective Cyclic Charts, especially on Precessed Lunar Returns.

Much simpler is a comparison between the Tropical (Solar System) and the Sidereal (fixed heaven) measurement. It is a fact that Transits measured in our Solar System, that is, on the Ecliptic, give much closer results than the Sidereal measurement, if applied in aspects to the birth chart. To test this, we recommend using events of well-authenticated State Horoscopes, such as the 1801 Map of the United Kingdom. Here, for the year 1988, Transits measured in the Sidereal Zodiac appear with extended orbs (Precession for 187 years = 2º 37 '), while in the Tropical measurement the appropriate aspects are always quite close.

The aim of astrological research should be to put astrology on a real scientific base. Unfortunately, a great number of astrologers regard astrology as an art (as they say), denying its direct undoubted relationship to the world of sciences. This illogical classification not only offends against all the wonderful productions in the arts that have been created during the centuries, but also shows that these astrologers lack a really constructive mind. Many of them take refuge in philosophy, esoterics and other matters that are changeable or perishable, and closely connected with the planet NEPTUNE. Everything that works with measurements can be true, and be a real science (MERCURY, JUPITER, URANUS), or false - fiction, (MERCURY, NEPTUNE).

Psychology and psychoanalysis, which do not have measurements, and are based on empiric assumptions, are recognized as sciences and are taught at most Universities, despite the controversial methods used. It is about time that astrology, with its facilities now for faster research, should speed up to give the lie to all those scientists who, with some justification, put astrology in the field of superstition.

APPENDICES

Table for Precession ..... Years - ' of arc

1y - 1'	21y - 18'	41y - 34'	61y - 51'	81y - 1º 08'
2y - 2'	22y - 18'	42y - 35'	62y - 52'	82y - 1º 08'
3y - 3'	23y - 19'	43y - 36'	63y - 53'	83y - 1º 09'
4y - 3'	24y - 20'	44y - 37'	64y - 53'	84y - 1º 10'
5y - 4'	25y - 21'	45y - 38'	65y - 54'	85y - 1º 11'
6y - 5'	26y - 22'	46y - 38'	66y - 55'	86y - 1º 12'
7y - 6'	27y - 23'	47y - 39'	67y - 56'	87y - 1º 13'
8y - 7'	28y - 23'	48y - 40'	68y - 57'	88y - 1º 13'
9y - 8'	29y - 24'	49y - 41'	69y - 58'	89y - 1º 14'
10y - 8'	30y - 25'	50y - 42'	70y - 58'	90y - 1º 15'
11y - 9'	31y - 26'	51y - 43'	71y - 59'	91y - 1º 16'
12y - 10'	32y - 27'	52y - 43'	72y - 1º 00'	92y - 1º 17'
13y - 11'	33y - 28'	53y - 44'	73y - 1º 01'	93y - 1º 18'
14y - 12'	34y - 28'	54y - 45'	74y - 1º 02'	94y - 1º 18'
15y - 13'	35y - 29'	55y - 46'	75y - 1º 03'	95y - 1º 19'
16y - 13'	36y - 30'	56y - 47'	76y - 1º 03'	96y - 1º 20'
17y - 14'	37y - 31'	57y - 48'	77y - 1º 04'	97y - 1º 21'
18y - 15'	38y - 32'	58y - 48'	78y - 1º 05'	98y - 1º 22'
19y - 16'	39y - 33'	59y - 49'	79y - 1º 06'	99y - 1º 23'
20y - 17'	40y - 33'	60y - 50'	80y - 1º 07'	100y - 1º 24'

<u>Exemple:</u> Event 1962, Oct. 22,
Radix USA 1 <u>1776, July 4,</u>
186 years = 1º 24' (100y) + 1º 12' (86y) = <u>2º 36'</u>

For corresponding Prenatal Dates, here 1776 - 186 = **1690**
Precession (Recession) has to be subtracted.

USA 1 MOON rad = 18º Aqu 28'
<u>+ 2º 36'</u> for 186 years
MOON precessed 21º Aqu 04' postnatal for 1962

MOON recessed ~~17~~º **Aqu** 52' prenatal for 1690
15°

References

1. *Prediction (I), using Common and Prenatal Cycles*, by the writer.

2. *Prediction II*, pages 2, 9, 10 .

3. *Prediction II,* pages 33 - 52 .

4. *Prediction I and III*, Appendix .

5. *Prediction I*, pages 95, 96 - Total Solar Eclipse 1870, December 22 .

6. *Prediction I,* Appendix .

7. In all demonstrated Lunar Returns Precession has been applied. Back to 1912 the computation was by the Precision Method, using Newton's formulae *regula falsorum* (computer program) .

8. *Prediction I*, pages 23 - 38 .

9. The Natal Quotidian or Secondary Lunar Return, *Prediction I* , pages 47 - 51 .

10. *Prediction III*, Fixed Star Catalogue, pages 109 - 117 .

11. *Prediction III*, pages 9 - 30 . The idea of the New Partner Horoscope had its origin in the consideration that the horoscope of the younger partner has to be seen as a Transit Map with regards to the map of the elder one, that is, the New Partner Horoscope is a Prenatal Transit Chart based on the elder partner's Radix, with the birth data of the younger partner as a transit.

12. *Prediction III*, pages 103 - 108 .

13. Quarti Solar Returns are computed for the SUN's two Radical square positions. For example : Radical SUN 21º 32' 07" Aries ; Quarter I = 21º 32' 07" Cancer; Quarter II = 21º 32' 07" Capricorn .
Demi- Precessed Solar Return = 21º 32' 07" Libra .
Demi and Quarti Solar Returns are of considerable efficacy only in **Precessed** Postnatal and Prenatal Solar Returns .

14. *Prediction* I, pages 115 - 117.

15. The Overlap Method : An event is most likely to occur in that time period covered by all Cyclic Charts concerned that show the event. This means that there is an overlapping period that is covered by all the charts of the (sometimes different) Radices analyzed.

16. *Prediction II*, pages 53 - 59.

17. Primary and Secondary Directions have been classified as follows :
* Appropriate Standard Directions and those characteristic of the circumstances of the event.

The writer does not maintain that all reproduced Directions have necessarily reflected the events analyzed. It is very likely that one or other Direction is associated with a different event, or with an event that is closely bound up with the event analyzed. Naturally, the result of a rectification is never affected by these circumstances, as in all charts the events are reflected by a sufficient number of very characteristic Directions with small orbs.

Abbreviations : d - direct ; c - converse (Primary Directions) .
p - progressed ; re- regressed (Secondary Directions) .

Abbreviations on Charts: PREN TROP S - Prenatal Tropical Solar Return
PREC S R - Precessed Solar Return ; **PREN SOL ECL**- Prenatal Solar Eclipse
PLR - Precessed Lunar Return , **DPLR** - Precessed Demi-Lunar Return
